

PART - I

Each question carries one mark.

 $50 \times 1 = 50$

1. The production line of a chip manufacturing unit wants to simulate the probability of a chip being manufactured defective. Common sense says that the probability of a chip being defective does not depend on whether or not the previous chip was defective. Hence, the probability distribution, appropriate for the situation, is
(A) uniform (B) normal (C) binomial (D) triangular.
2. The data structure useful for the breadth first search of a graph is
(A) stack (B) queue (C) linked list (D) dequeue.
3. Merge sort uses
(A) greedy methodology (B) divide and conquer methodology
(C) dynamic methodology (D) heuristics with back tracking.
4. A municipality stored details about every house in its perview as a 'structure', each containing a large number of details. These are to be sorted. The best approach is
(A) sort them directly
(B) store them in an array and sort the array
(C) store pointers to them in an array and sort the array
(D) store them in a linked list and sort the linked list.
5. The height of a binary tree is defined as the maximum number of edges in any path from the root to the leaf. The maximum number of nodes in any binary tree of height h is
(A) 2^h (B) $2^{h-1} - 1$
(C) 2^{h+1} (D) $2^{h+1} - 1$.
6. The principle of cache memory is primarily based on
(A) the principle of locality of reference
(B) the heuristic 90 - 10 rule
(C) the fact that the entire program is not required at once
(D) the faster memories also tend to be costlier.

April Engineering Science 2011 Question Paper:

International Conference on Digital Libraries (ICDL) 2013 Shantanu Ganguly, P. K. Bhattacharya, 2013-11-29 ICDL conferences are recognized as one of the most important platforms in the world where noted experts share their experiences. Many DL experts have contributed thought-provoking papers in ICDL 2013. These important papers are reviewed and conceptualized into ICDL on different areas of DL proceedings. The Proceedings have two volumes and have over 1100 pages.

Intelligent Systems for Science and Information Liming Chen, Supriya Kapoor, Rahul Bhatia, 2014-01-25 The book *Intelligent Systems for Science and Information* is the remarkable collection of extended chapters from the selected papers that were published in the proceedings of Science and Information SAI Conference 2013. It contains twenty-four chapters in the field of Intelligent Systems which received highly recommended feedback during SAI Conference 2013 review process. All chapters have gone through substantial extension and consolidation and were subject to another round of rigorous review and additional modification. These chapters represent the state of the art of the cutting-edge research and technologies in related areas and can help inform relevant research communities and individuals of the future development in Science and Information.

Situational Method Engineering Brian Henderson-Sellers, Jolita Ralyté, Pär J. Ågerfalk, Matti Rossi, 2014-06-03 While previously available methodologies for software like those published in the early days of object technology claimed to be appropriate for every conceivable project, situational method engineering (SME) acknowledges that most projects typically have individual characteristics and situations. Thus, finding the most effective methodology for a particular project needs specific tailoring to that situation. Such a tailored software development methodology needs to take into account all the bits and pieces needed for an organization to develop software, including the software process, the input and output work products, the people involved, the languages used to describe requirements, design code, and eventually also measures of success or failure. The authors have structured the book into three parts. Part I deals with all the basic concepts, terminology, and overall ideas underpinning situational method engineering. As a summary of this part, they present a formal meta-model that enables readers to create their own quality methods and supporting tools. In Part II, they explain how to implement SME in practice, i.e., how to find method components and put them together and how to evaluate the resulting method. For illustration, they also include several industry case studies of customized or constructed processes, highlighting the impact that high-quality engineered methods can have on the success of an industrial software development. Finally, Part III summarizes some of the more recent and forward-looking ideas. This book presents the first summary of the state of the art for SME. For academics, it provides a comprehensive conceptual framework and discusses new research areas. For lecturers, thanks to its step-by-step explanations from basics to the customization and quality assessment of constructed methods, it serves as a solid basis for comprehensive courses on the topic. For industry methodologists, it offers a reference guide on features and technologies to consider when developing in-house software development methods or customising and adopting off-the-shelf ones.
