This IBM Redbooks publication is based on the book *Introduction to the New Mainframe z OS Basics SG24 6366* which was produced by the International Technical Support Organization ITSO Poughkeepsie Center. It provides students of information systems technology with the background knowledge and skills necessary to begin using the basic facilities of a mainframe computer. For optimal learning students are assumed to have successfully completed an introductory course in computer system concepts such as computer organization and architecture, operating systems, data management, or data communications. They should also have successfully completed courses in one or more programming languages and be PC literate. This textbook can also be used as a prerequisite for courses in advanced topics or for internships and special studies. It is not intended to be a complete text covering all aspects of mainframe operation. It is also not a reference book that discusses every feature and option of the mainframe facilities. Others who can benefit from this course include experienced data processing professionals who have worked with non-mainframe platforms or who are familiar with some aspects of the mainframe but want to become knowledgeable with other facilities and benefits of the mainframe environment. As we go through this course we suggest that the instructor alternate between text lecture discussions and hands-on exercises. Many of the exercises are cumulative and are designed to show the student how to design and implement the topic presented. The instructor-led discussions and hands-on exercises are an integral part of the course and can include topics not covered in this textbook. In this course we use simplified examples and focus mainly on basic system functions. Hands-on exercises are provided throughout the course to help students explore the mainframe style of computing. At the end of this course you will be familiar with the following information:

- Basic concepts of the mainframe including its usage and architecture
- Fundamentals of IBM z/VSE VSE an IBM z/TM Systems entry mainframe operating system OS
- An understanding of mainframe workloads and the major middleware applications in use on mainframes today

The basis for subsequent course work in more advanced specialized areas of z/VSE such as system administration or application programming *DB2 Universal Database for OS/390 V7.1 Application Certification Guide* Susan Lawson, 2002 IBM's definitive DB2 UDB V7.1 application development reference and exam study guide for the OS/390 and z/OS platforms. The other members of the Classics Club are equally as fascinating. Bunny Corcoran is a wealthy and spoiled young man who is always looking for a good time. Charles Tavis is a quiet and reserved young man who is deeply in love with Henry. Camilla Macaulay is a beautiful and intelligent young woman who is drawn to the power and danger of the Classics Club. The students are all deeply in love with Morrow, and they are willing to do anything to please him. Morrow is a complex and mysterious figure, and he seems to be manipulating the students for his own purposes. As the students become more involved with Morrow, they begin to commit increasingly dangerous acts. The Secret History is a brilliant and suspenseful novel that will keep you speculating until the very end. The novel is a cautionary tale about the dangers of obsession and the power of evil.
