

The loss of sight is the loss of access from the state of blindness to the point of the vision caused by the vision.

The angle of depression of an object viewed is the angle formed by the line of sight with the horizontal when it is above the horizontal line. i.e., the angle whose vertex is located at the eye of the observer.

The angle of depression of an object above is the angle formed by the line of sight with the horizontal plane it is above the horizontal line; i.e., the line of sight extended and taken forward of the object.

The height or length of an object or the distance between two distant objects can be determined with the help of trigonometric ratios.
