Questions and Answers in Embedded Contexts Utpal Lahiri, 2002 Linguists and others have realised for some time that predicates of the know and wonder classes behave differently in semantic terms with respect to their interrogative complements but have not so far fully understood how or why This book seeks to explore and to provide solutions to this and to related problems in explaining the meaning and grammar of embedded interrogatives and the predicates that take interrogative complements The investigation extends to the semantics of adverbs of quantification theories of plurals and lexical selection The work is addressed to those working in semantics and to syntacticians concerned with the constraints that syntactic structure imposes on semantic interpretation It is at the heart of current research in the syntax semantics interface Although some knowledge of formal semantics is assumed the book has been written to be accessible to researchers in computer science philosophy and cognitive science

Galois Theory, Hopf Algebras, and Semiabelian Categories George Janelidze, 2004 This volume is based on talks given at the Workshop on Categorical Structures for Descent and Galois Theory Hopf Algebras and Semiabelian Categories held at The Fields Institute for Research in Mathematical Sciences Toronto ON Canada The meeting brought together researchers working in these interrelated areas This collection of survey and research papers gives an up to date account of the many current connections among Galois theories Hopf algebras and semiabelian categories The book features articles by leading researchers on a wide range of themes specifically abstract Galois theory Hopf algebras and categorical structures in particular quantum categories and higher dimensional structures Articles are suitable for graduate students and researchers specifically those interested in Galois theory and Hopf algebras and their categorical unification

Cylindric-like Algebras and Algebraic Logic Hajnal Andréka, Miklós Ferenczi, István Németi, 2014-01-27 Algebraic logic is a subject in the interface between logic algebra and geometry it has strong connections with category theory and combinatorics Tarski's quest for finding structure in logic leads to cylindric like algebras as studied in this book they are among the main players in Tarskian algebraic logic Cylindric algebra theory can be viewed in many ways as an algebraic form of definability theory as a study of higher dimensional relations as an enrichment of Boolean Algebra theory or as logic in geometric form cylindric in the name refers to geometric aspects Cylindric like algebras have a wide range of applications in e.g. natural language theory data base theory stochastics and even in relativity theory The present volume consisting of 18 survey papers intends to give an overview of the main achievements and new research directions in the past 30 years since the publication of the Henkin Monk Tarski monographs It is dedicated to the memory of Leon Henkin

Invariant Means and Finite Representation Theory of C^ -Algebras* Nathaniel Patrick Brown, 2006 Various subsets of the tracial state space of a unital C algebra are studied The largest of these subsets has a natural interpretation as the space of invariant means II_1 factor representations of a class of C algebras considered by Sorin Popa are also studied These algebras are shown to have an unexpected variety of II_1 factor representations In addition to

developing some general theory we also show that these ideas are related to numerous other problems in operator algebras

Algebraic and Logic Programming Giorgio Levi, Mario Rodriguez-Artalejo, 1994-08-24 This volume constitutes the proceedings of the Fourth International Conference on Algebraic and Logic Programming ALP 94 held in Madrid Spain in September 1994 Like the predecessor conferences in this series ALP 94 succeeded in strengthening the cross fertilization between algebraic techniques and logic programming Besides abstracts of three invited talks the volume contains 17 full revised papers selected from 41 submissions the papers are organized into sections on theorem proving narrowing logic programming term rewriting and higher order programming

Galois Theory, Rings, Algebraic Groups and Their Applications Simeon Ivanov, 1992 This collection consists of original work on Galois theory rings and algebras algebraic geometry group representations algebraic K theory and some of their applications

Algebraic Geometry. Sundance 1986 Audun Holme, Robert Speiser, 2006-11-14 This volume presents selected papers resulting from the meeting at Sundance on enumerative algebraic geometry The papers are original research articles and concentrate on the underlying geometry of the subject

Classification of Higher Dimensional Algebraic Varieties Christopher D. Hacon, Sándor Kovács, 2011-02-02 Higher Dimensional Algebraic Geometry presents recent advances in the classification of complex projective varieties Recent results in the minimal model program are discussed and an introduction to the theory of moduli spaces is presented

Relational and Algebraic Methods in Computer Science Peter Höfner, Damien Pous, Georg Struth, 2017-05-08 This book constitutes the proceedings of the 16th International Conference on Relational and Algebraic Methods in Computer Science RAMiCS 2017 held in Lyon France in May 2017 The 17 revised full papers and 2 invited papers presented together with 1 invited abstract were carefully selected from 28 submissions Topics covered range from mathematical foundations to applications as conceptual and methodological tools in computer science and beyond

At the Frontier of Spacetime Torsten Asselmeyer-Maluga, 2016-04-28 In this book leading theorists present new contributions and reviews addressing longstanding challenges and ongoing progress in spacetime physics In the anniversary year of Einstein's General Theory of Relativity developed 100 years ago this collection reflects the subsequent and continuing fruitful development of spacetime theories The volume is published in honour of Carl Brans on the occasion of his 80th birthday Carl H Brans who also contributes personally is a creative and independent researcher and one of the founders of the scalar tensor theory also known as Jordan Brans Dicke theory In the present book much space is devoted to scalar tensor theories Since the beginning of the 1990s Brans has worked on new models of spacetime collectively known as exotic smoothness a field largely established by him In this Festschrift one finds an outstanding and unique collection of articles about exotic smoothness Also featured are Bell's inequality and Mach's principle Personal memories and historical aspects round off the collection

Fundamental Algebraic Geometry Barbara Fantechi, 2005 Presents an outline of Alexander Grothendieck's theories This book discusses four main themes descent theory Hilbert and Quot schemes the formal existence theorem and the Picard

scheme It is suitable for those working in algebraic geometry

Partially Ordered Rings and Semi-Algebraic Geometry Gregory W. Brumfiel, 1979-12-20 The purpose of this unique book is to establish purely algebraic foundations for the development of certain parts of topology Some topologists seek to understand geometric properties of solutions to finite systems of equations or inequalities and configurations which in some sense actually occur in the real world Others study spaces constructed more abstractly using infinite limit processes Their goal is to determine just how similar or different these abstract spaces are from those which are finitely described However as topology is usually taught even the first more concrete type of problem is approached using the language and methods of the second type Professor Brumfiel's thesis is that this is unnecessary and in fact misleading philosophically He develops a type of algebra partially ordered rings in which it makes sense to talk about solutions of equations and inequalities and to compare geometrically the resulting spaces The importance of this approach is primarily that it clarifies the sort of geometrical questions one wants to ask and answer about those spaces which might have physical significance

Basic Algebraic Geometry 1 Igor R. Shafarevich, 2013-11-27 The first edition of this book came out just as the apparatus of algebraic geometry was reaching a stage that permitted a lucid and concise account of the foundations of the subject The author was no longer forced into the painful choice between sacrificing rigour of exposition or overloading the clear geometrical picture with cumbersome algebraic apparatus The 15 years that have elapsed since the first edition have seen the appearance of many beautiful books treating various branches of algebraic geometry However as far as I know no other author has been attracted to the aim which this book set itself to give an overall view of the many varied aspects of algebraic geometry without going too far afield into the different theories There is thus scope for a second edition In preparing this I have included some additional material rather varied in nature and have made some small cuts but the general character of the book remains unchanged
