

Lesson 3.1 -- Using and Interpreting Function Notation

Graphs:

can provide an overview of the function. The graph shows the input-output pairs of the function.

Interpreting a function means looking at the input and output values. For example, if $f(1) = 2$, that means the input value 1 is associated with the output value 2.

Graphing a function means showing only the input-output pairs of the function.

Check Your Understanding

1. A graph of $y = f(x)$ is shown below.

a. $f(0) = 2$

b. $f(2) = 1$

- c. What is the function value of f at $x = 0$?

$f(0) = 2$ since $f(0) = 2$

2. Use this graph to find the number of people in the area 1000 feet from a house after the house is open. Interpret each of the following statements in context.

a. $f(1000) = 10$

At 1000 feet from the house, there are 10 people in the area.

b. $f(1000) = 1000$

At 1000 feet from the house, there are 1000 people in the area.

3. Scientists have discovered that there is a pattern, or rule, that can determine the heading distance a car travels at a certain speed. Use the car's speed, x , and then divide the result by 10.

- a. Use this rule to predict the heading distance of a car moving through.

$f(x) = \frac{x}{10}$

- b. Write an equation for this that represents the car's heading distance when driving at a speed of 10 miles per hour.

$f(10) = \frac{10}{10}$
