years ago when I began consulting full time I quickly discovered that despite three advanced academic degrees my practical industrial experience had some significant gaps It thus was necessary initially to spend considerable nonbillable time collecting and organizing a great deal of essential information on the various aspects of modern data communications The task was made more difficult by the highly interdisciplinary nature of the field with the required information scattered throughout the vast international literature of telecommunications computers electrical engineering military systems mathematics operations research optimization speech processing and the murky world of legal and regulatory policy Although there were a number of fine books and periodicals in each of these specialized disciplines I was unable to find a single comprehensive text that covered the entire field at even a modestly attractive technical and mathematical level After going to the trouble of organizing all this diverse material for my clients and students it seemed rather natural to put it into book form and thus share it with those professionals working with computer data communications who need a comprehensive coverage of the subject at a level immediately applicable to their work and yet easily accessible for self study The project was facilitated by an agreeable publisher and an incredibly understanding and cooperative family and Practical Computer Data Communications is the result

in Education ,1999 **Applied Mathematics for Scientists and Engineers** Youssef Raffoul,2023-10-26 After many years of teaching graduate courses in applied mathematics Youssef N Raffoul saw a need among his students for a book reviewing topics from undergraduate courses to help them recall what they had learned while his students urged him to publish a brief and approachable book on the topic Thus the author used his lecture notes from his graduate course in applied mathematical methods which comprises three chapters on linear algebra calculus of variations and integral equations to serve as the foundation for this work These notes have undergone continuous revision Applied Mathematics for Scientists and Engineers is designed to be used as a graduate textbook for one semester The five chapters in the book can be used by the instructor to create a one semester three chapter course The only prerequisites for this self contained book are a basic understanding of calculus and differential equations In order to make the book accessible to a broad audience the author endeavored to strike a balance between rigor and presentation of the most challenging content in a simple format by adopting friendlier more approachable notations and using numerous examples to clarify complex themes The hope is both instructors and students will find in this single volume a refresher on topics necessary to further their courses and study Applied Mechanics Reviews ,1969 Designs 2002 W.D. Wallis,2013-12-01 This volume is a sequel to our 1996 compilation Computational and Constructive Design Theory Again we concentrate on two closely re lated aspects of the study of combinatorial designs design construction and computer aided study of designs There are at least three classes of constructive problems in design theory The first type of problem is the construction of a specific design This might arise because that one particular case is an exception to a general rule the last remaining case of a problem or the smallest unknown case A good example is the proof that there is no projective plane of parameter 10 In that case the computations involved were not different in kind from those which have been done by human brains without electronic assistance they were merely longer Computers have also been useful in the study of combinatorial spec trum problems if a class of design has certain parameters what is the set of values that the parameters can realize In many cases there is a recursive construction so that the existence of a small number of

starter designs leads to the construction of infinite classes of designs and computers have proven very useful in finding starter designs
