Fuzzy Information & Engineering and Operations Research & Management Bing-Yuan Cao, Hadi Nasseri, 2013-11-26
Fuzzy Information Engineering and Operations Research Management is the monograph from submissions by the 6th International Conference on Fuzzy Information and Engineering ICFIE2012 Iran and by the 6th academic conference from Fuzzy Information Engineering Branch of Operation Research Society of China FIEBORSC2012 Shenzhen China It is published by Advances in Intelligent and Soft Computing AISC We have received more than 300 submissions Each paper of it has undergone a rigorous review process Only high quality papers are included in it containing papers as follows I Programming and Optimization II Lattice and Measures III Algebras and Equation IV Forecasting Clustering and Recognition V Systems and Algorithm VI Graph and Network VII Others *Classic Middle School Literature Mystery* Nancy Garrity, 2000-03 Educational resource for teachers parents and kids **Journal** Royal Society for the Encouragement of Arts, Manufactures and Commerce, 1859 **Queries with Answers in Literature, Art, Science, Education** Charles Wells Moulton, 1888 **Construction Logistics Solutions in Urban Areas** Mats Janné, 2018-05-15 More and more people are living in or moving to urban areas than ever before This attraction to urban areas means that new houses and work places are needed Building new houses or renovating older housing stock is a natural way for a city to evolve However the end products of construction projects are produced at their place of consumption This means that a multitude of materials and resources need to be delivered to and removed from each construction site This leads to new transport flows being created in urban areas In urban areas these transports are subjected to space limitations environmental demands accessibility demands and noise restrictions This has led to a situation where material deliveries to construction sites needs to be coordinated and managed in ways that reduce their impact on the urban transport system and at the same time ensuring efficient construction projects In essence construction in urban areas faces two problems the urban transport problem and the problem of coordinating multiple construction stakeholders One way to address these problems is through the use of construction logistics solutions such as terminals e g construction logistics centres and checkpoints The aim of both types of solutions is to control and coordinate construction transports In the construction industry these solutions are however still a rather new phenomenon This means that how these solutions are perceived by different stakeholders and the effect the solutions have on material flows and costs needs to be explored further The purpose of this thesis is to explore how construction logistics solutions can be used as a means to coordinate material flows to ensure efficient construction and reduce disturbances on the urban transport system To achieve this purpose the following research questions have been addressed RQ1 How are different stakeholders in the construction industry affected by construction logistics solutions RQ2 How will the use of construction logistics solutions affect material flows and costs in urban construction projects To answer the research questions two main methodologies have been used case study research for the empirical studies and literature

reviews for the analysis of the case studies as well as for understanding how supply chain management logistics and third party logistics affects the inter organizational relationships of the construction industry The main findings of the research are firstly that construction logistics solutions do have a role to play in the coordination of different construction stakeholders Adding this new node will force construction stakeholders to address coordination issues in order to ensure that material deliveries arrive to construction sites on time This also implies that new inter organizational relationships will evolve where communication is key However this may not be an easy task as it will call for an attitude adjustment towards a more open and collaborative environment Secondly adding a construction logistics solution can reduce some unnecessary friction between construction stakeholders and third parties Coordinated material flows can lead to a reduction in the amount of material delivery vehicles that travels to site thus alleviating some of the congestion in the urban transport system This will not reduce all friction between construction projects and third parties but it is a step in the right direction Thirdly a construction logistics solution must come with a set of regulations and a governance strategy from the initiator of the solution This governance strategy must be clearly stated and communicated to the affected stakeholders To alleviate animosity towards the solution flexibility and stakeholder involvement is key If the directly affected stakeholders are consulted on the function chances are that they will be more accepting of the solution
