Anytime, Anywhere Rebecca E. Wolfe, Adria Steinberg, Nancy Hoffman, 2013-05-01 Anytime Anywhere synthesizes existing research and practices in the emerging field of student centered learning and includes profiles of schools that have embraced this approach Educators have argued that students should be at the center of learning constructing new knowledge based on what is interesting to them and receiving guidance in classrooms or anywhere they may happen to be from adults with whom they have positive relationships Now with the advent of new technologies researchers are confirming the value of this approach by showing how the human brain and memory work in response to different environments and how digital tools give students powerful new ways to express what they've learned Math Educ, 2007 Contains abstracts in the field of mathematics education extracted from documents worldwide

Psychology and Mathematics Education Gila Hanna, Laura Macchi, Karin Binder, Laura Martignon, Katharina Loibl, 2023-09-05 Modern Mathematics is constructed rigorously through proofs based on truths which are either axioms or previously proven theorems Thus it is par excellence a model of rational inquiry Links between Cognitive Psychology and Mathematics Education have been particularly strong during the last decades Indeed the Enlightenment view of the rational human mind that reasons makes decisions and solves problems based on logic and probabilities was shaken during the second half of the twentieth century Cognitive psychologists discovered that humans thoughts and actions often deviate from rules imposed by strict normative theories of inference Yet these deviations should not be called errors as Cognitive Psychologists have demonstrated these deviations may be either valid heuristics that succeed in the environments in which humans have evolved or biases that are caused by a lack of adaptation to abstract information formats Humans as the cognitive psychologist and economist Herbert Simon claimed do not usually optimize but rather satisfice even when solving problem This Research Topic aims at demonstrating that these insights have had a decisive impact on Mathematics Education We want to stress that we are concerned with the view of bounded rationality that is different from the one espoused by the heuristics and biases program In Simon's bounded rationality and its direct descendant ecological rationality rationality is understood in terms of cognitive success in the world correspondence rather than in terms of conformity to content free norms of coherence e.g. transitivity
