Strigolactones Gausiya Bashri, Shamsul Hayat, Andrzej Bajguz, 2024-02-29 *Strigolactones Synthesis Application and Role in Plants* presents the current state of the science for this recently discovered class of plant hormones offering foundational insights through latest developments Strigolactones SLs are derived from carotenoid metabolism and act as signaling molecules in plants and are found to be involved in many developmental processes such as seed germination root formation leaf senescence nutrient uptake reproductive maturity and interactions of host plants with symbiotic or parasitic organisms They also regulate developmental processes that adapt shoot and root architecture SLs control these processes in plants by interacting with other plant hormones and signaling molecules In addition SLs also act

as essential regulators of a plant's response to various environmental perturbations. Due to this, SLs are used in agriculture to enhance the tolerance of plants under biotic and abiotic stresses. The first part of *Strigolactones* covers the structure of natural and synthetic SLs, synthesis, transport, signaling, and their application role in the growth and development of plants like seed germination, root growth, and stem branching, plant architecture. Further, the crosstalk of SLs with other plant hormones and signaling molecules are discussed. Later, the role of SLs in plant defense systems, particularly in biotic and abiotic stresses viz. heavy metals, salt, temperature, radiation, pesticide, drought, and flood stress on plants and their responses are reviewed. Concluding with the latest discoveries, future perspectives and challenges in plant biology, this book will be a valuable reference for those in plant and agricultural sciences. Provides in-depth coverage of strigolactones basics, use, and potential. Identifies the role of SLs in plant defense systems against both biotic and abiotic stresses. Presents the latest research that will be valuable for both plant and agriculture science.

Sustainability · Strategy · Space - exploring influences on governing for urban sustainability in municipalities Paul Fenton, 2016-06-21. The pursuit of urban sustainability is considered central to sustainable development and is a key objective of the global Sustainable Development Goals 2015 and the New Urban Agenda 2016. This thesis aims to contribute to debates on urban sustainability by providing insights as to the role of actors participating in processes of governing for urban sustainability with particular focus on the municipal organisation. The thesis employs an interdisciplinary approach to illustrate divergent approaches to governing for urban sustainability with reference to empirical studies of strategic planning processes in municipalities in selected North western European countries: Sweden, Switzerland, and The Netherlands. These studies address themes including climate change, sustainable transport, and multi-level governance. The thesis provides a broad overview of theoretical discussions related to governing strategy and planning, the role of actors in governing for urban sustainability, and the particular importance of climate change as a challenge for urban sustainability. A number of research gaps are identified and addressed in two research questions focusing on the organisation and practice of processes of governing for urban sustainability and the factors influencing actors participating in such processes. The thesis responds to these research questions with reference to five appended papers which illustrate different dimensions of governing for urban sustainability. The first paper concerns the organisation of processes to develop energy and climate strategies in Swedish municipalities, and the second paper highlights the experiences of actors participating in such processes. The third paper presents results from a survey illustrating the expectations of stakeholders active in governing transport in the city of Norrköping, Sweden. In the fourth paper, the development and implementation of policies aiming for sustainable transport and urban sustainability in Basel, Switzerland, are discussed. In the final paper, cooperation through transnational municipal networks is explored with reference to the World Ports Climate Declaration, an initiative of the city of Rotterdam. The thesis confirms the presence of five factors: capacity, mandate, resources, scope, and will, that shape the strategy space of actors and play an important role in

conditioning the form and content of processes of governing for urban sustainability The thesis suggests that the ways in which a municipal organisation perceive and mobilise the five factors will strongly determine the extent of its sustainability strategy space In sum municipal organisations and other actors participating in processes of governing for urban sustainability need to mobilise the five factors and expand their strategy space in order to achieve vertical and horizontal alignment of strategic objectives and facilitate implementation that delivers transformative change **Guide to**
