

QUESTION 3

3.1 Scientists investigated the resistance of mosquitos to DDT.

The following steps were followed:

- They captured a sample of mosquitos from the environment.
- The mosquitos were then exposed to a standard dose of DDT (4% DDT for 1 hour) in the laboratory.
- The number of mosquitos that died was counted.
- Those that survived were left to reproduce.
- A sample was taken from this population every two months and the same procedure was followed for a period of 16 months.

The results are shown in the table below.

TIME (IN MONTHS)	MORTALITY OF MOSQUITOES (%)
0	95
2	87
4	80
6	69
8	60
10	54
12	35
14	27
16	22

3.1.1 Identify the:

- (a) Independent variable (1)
- (b) Dependent variable (1)

3.1.2 Formulate a hypothesis for this investigation. (3)

3.1.3 Draw a line graph to show how the mortality of mosquitoes changed over the period of the investigation due to the application of DDT. (6)

3.1.4 State TWO factors, other than those mentioned, that should be controlled in this investigation. (2)

3.1.5 State TWO ways in which the scientists could improve the reliability of their results. (2)

Broadway,Claire M. Zedelius,Jonathan W. Schooler,Simon Grondin,2015-07-02 Researchers working in many fields of psychology and neuroscience are interested in the temporal structure of experience as well as the experience of time at scales of a few milliseconds up to a few seconds as well as days months years and beyond This Research Topic supposes that broadly speaking the field of time psychology can be organized by distinguishing between perceptual and conceptual time scales Dealing with conceptual time mental time travel also called mental simulation self projection episodic semantic memory prospection foresight allows humans and perhaps other animals to imagine and plan events and experiences in their personal futures based in large part on memories of their personal pasts as well as general knowledge Moreover contents of human language and thought are fundamentally organized by a temporal dimension enmeshed with it so thoroughly that it is usually expressible only through spatial metaphors But what might such notions have to do with experienced durations of events lasting milliseconds up to a few seconds during the so called present moment of perception action cycle time This Research Topic is organized around the general premise that by considering

how mental time travel might scale down to time perception and vice versa no less progress and integrative synthesis within and across scientific domains might be facilitated Bipolar configurations of future and past orientations of the self may be repeated in parallel across conceptual and perceptual time scales subsumed by a general Janus like feedforward feedback system for goal pursuit As an example it is notable that the duality of prospection and semantic episodic memory operating at conceptual time scales has an analogue in perception action cycle time namely the interplay of anticipatory attention and working memory Authors from all areas of psychology and neuroscience are encouraged to submit articles of any format accepted by the journal Original Research Methods Hypothesis Theory Reviews etc which might speak to questions about time and temporal phenomena at long and or short time scales

book on a variety of devices *Innovation and the Pharmaceutical Industry* H. Tristram Engelhardt, 2014-05-14 *Innovation and the Pharmaceutical Industry* Critical Reflections on the Virtues of Profit examines the central role of profit in the development of pharmaceuticals medical devices and health care generally Recent efforts to understand this role have often underestimated and even dismissed its importance arguing for its replacement by other means and mechanisms However as the essays in this volume attest it would be impossible to account adequately for the range of pharmaceuticals and medical devices that have become part of everyday medicine without recognizing that the depth and scope of innovations are tied not simply to altruism a concern for the common good or the pursuit of knowledge for its own sake but crucially to the pursuit of private good and of individual profit Balancing a concern for theory and practice the analyses and evaluations provided in these essays touch directly on many of the most heated and important debates in pharmaceutical ethics such as profit margins corporate social responsibility drug advertising litigation patents and parallel trade Reflecting critically on the problems and prospects of medical innovation they invite a rethinking of the foundations of the bioethics and business ethics of the pharmaceutical and medical device industries by focusing on the long term impact of policy decisions for human health and well being Philosophy of Molecular Medicine Giovanni Boniolo, Marco J. Nathan, 2016-11-18 *Philosophy of Molecular Medicine* Foundational Issues in Theory and Practice aims at a systematic investigation of a number of foundational issues in the field of molecular medicine The volume is organized around four broad modules focusing respectively on the following key aspects What are the nature scope and limits of molecular medicine How does it provide explanations How does it represent and model phenomena of interest How does it infer new knowledge from data and experiments The essays collected here authored by prominent scientists and philosophers of science focus on a handful of mainstream topics in the philosophical literature such as causation explanation modeling and scientific inference These previously unpublished contributions shed new light on these traditional topics by integrating them with problems methods and results from three prominent areas of contemporary biomedical science basic research translational and clinical research and clinical practice
