the junior secondary years of education students aged 11-15 since this is the age range in which students choose whether or not to formally opt out of STEM education. It is here that the book makes a significant contribution to the field by integrating the STEM area and focusing on the junior years of schooling. While developing this book, the editors drew on two main premises. Firstly, STEM is seen as the integrated study of science, technology, engineering, and mathematics in a coherent learning paradigm that is based on real-world applications. Secondly, it is important to integrate digital technologies into STEM education beyond the superficial use of ICTs seen in many schools. The book also addresses the challenges within STEM education, many of which are long-standing. To this end, it includes chapters on marginalised and diverse communities, ensuring that a broad range of perspectives on STEM education is included.

Improving a Country's Education Nuno Crato, 2020-11-23. This open access book compares and contrasts the results of international student assessments in ten countries. The OECD's Programme for International Student Assessment (PISA) released the results of its 2018 assessment in December 2019. This book reflects the debates that typically follow the release of these results and focuses on the causes of differences between countries. Such causes include continuous decline in one country, improvement combined with increasing internal inequalities in another country, or rapid improvement in spite of an outdated curriculum in yet another. In addition, the book discusses a number of general questions: Is knowledge outdated? Are computers taking over and replacing teachers? Are schools killing creativity? Are we adequately preparing the next generation? Are schools failing to educate our kids? The book starts out with a summary of PISA's evolution and PISA results and an explanation of the major factors that play a role in changes in countries' results. The next ten chapters are devoted to ten specific countries, offering a summary of data and an explanation of the major drivers for changes in education results for each one. Each chapter includes a short description of the country's educational system as well as the impact of PISA and other ILSA studies on the country's educational policies. The chapters also include a timeline of policy measures and main hallmarks of the country's educational evolution, discussing the impact of these measures on its PISA results. A final reference chapter explains what PISA is, what it measures, and how. While highlighting the 2018 results, the book also takes into consideration previous results as well as long-term initiatives. This book gathers the contribution of well-known and respected experts in the field. Specialists such as Eric Hanushek for the US, Tim Oates for England, Montse Gomendio for Spain, Gunda Tire for Estonia, and all other contributors draw on their vast experience and statistical analysis expertise to draw a set of rich country lessons and recommendations that are invaluable for all of those who care about improving a country's education system.
