The War of Guns and Mathematics David Aubin,Catherine Goldstein,2014-10-07 For a long time World War I has been shortchanged by the historiography of science Until recently World War II was usually considered as the defining event for the formation of the modern relationship between science and society In this context the effects of the First World War by contrast were often limited to the massive deaths of promising young scientists By focusing on a few key places Paris Cambridge Rome Chicago and others the present book gathers studies representing a broad spectrum of positions adopted by mathematicians about the conflict from militant pacifism to military scientific or ideological mobilization The use of mathematics for war is thoroughly examined This book suggests a new vision of the long term influence of World War I on mathematics and mathematicians Continuities and discontinuities in the structure and organization of the mathematical sciences are discussed as well as their images in various milieux Topics of research and the values with which they were defended are scrutinized This book in particular proposes a more in depth evaluation of the issue of modernity and modernization in mathematics The issue of scientific international relations after the war is revisited by a close look at the situation in a few Allied countries France Britain Italy and the USA The historiography has emphasized the place of Germany as the leading mathematical country before WWI and the absurdity of its postwar ostracism by the Allies The studies presented here help explain how dramatically different prewar situations prolonged interaction during the war and new international postwar organizations led to attempts at redrafting models for mathematical developments Sir George Dyson Paul Spicer,2014 George Dyson 1883 1964 was a highly influential composer educator and administrator whose work touched the lives of millions Yet today apart from his *Canterbury Pilgrims* and two sets of canticles for Choral Evensong his music is little known In this comprehensive and detailed study based not only on Dyson s own writings but on unpublished papers personal correspondence and interviews with his family and friends Paul Spicer brings this remarkable man and his lyrical passionate and engaging music to life once more *A Directory of Computer Software Applications* ,1979 *The Accountant* ,1967 Noncooperative Approaches to the Theory of Perfect Competition Andreu Mas-Colell,2014-05-10 Economic Theory Econometrics and Mathematical Economics A Series of Monographs and Textbooks *Noncooperative Approaches to the Theory of Perfect Competition* focuses on the application of noncooperative approaches to the theory of perfect competition including Cournot game no surplus condition and Nash equilibria The selection first elaborates on collusive behavior in noncooperative epsilon equilibria of oligopolies with long but finite lives and noncooperative price taking in large dynamic markets Discussions focus on noncooperative equilibria which support the monopoly allocation alternative definition of perfect epsilon equilibrium one period Cournot game fixed demand case and replication case The book takes a look at noncooperative price taking in large dynamic markets no surplus condition as a characterization of perfectly competitive equilibrium perfect competition profit criterion and the organization of economic activity Topics include

profits to individually improving welfare structure of firms competitive allocations as no surplus allocations profits as rents Walrasian and perfectly competitive equilibrium and no surplus and core equivalence as alternative characterizations of perfectly competitive equilibrium The manuscript ponders on Nash equilibria of market games and efficiency properties of strategic market games as well as commodities agents assignments strategic markets games proper and full Cournot Nash equilibria and finiteness and inefficiency The selection is a valuable source of data for researchers interested in noncooperative approaches to the theory of perfect competition
