Handbook of Gentrification Studies Loretta Lees, Martin Phillips, 2018-04-27 It is now over 50 years since the term gentrification was first coined by the British urbanist Ruth Glass in 1964 in which time gentrification studies has become a subject in its own right. This Handbook, the first ever in gentrification studies, is a critical and authoritative assessment of the field. Although the Handbook does not seek to rehearse the classic literature on gentrification from the 1970s to the 1990s in detail, it is referred to in the new assessments of the field gathered in this volume. The original chapters offer an important dialogue between existing theory and new conceptualisations of gentrification for new times and new places in many cases offering novel empirical evidence.

Transport, Mobility, and the Production of Urban Space Julie Cidell, David Prytherch, 2015-05-01 The contemporary urban experience is defined by flow and structured by circulating people, objects and energy. Geographers have long provided key insights into transportation systems. But today concerns for social justice and sustainability motivate new critical approaches to mobilities. Reimagining the city prompts an important question: How best to rethink urban geographies of transport and mobility? This original book explores connections in theory and practice between transport geographies and new mobilities in the production of urban space. It provides a broad introduction to intersecting perspectives of urban geography, transport geography and mobilities studies on urban places of flows. Diverse international and leading edge contributions reinterpret everyday intersections as nodes, urban corridors as links, cities and regions as networks and the discourses and imaginaries that frame the politics and experiences of mobility. The chapters illuminate nearly all aspects of urban transport from street regulation and roadway planning, intended and subversive practices of car and truck drivers, planning and promotion of mass transit, investments and the restructuring of freight and logistics networks. Together these offer a unique and important contribution for social scientists, planners and others interested in the politics of the city on the move.
