2014 June Exam Memorandum Grade11:

The Years That Matter Most Paul Tough, 2019-09-12 What has gone wrong in our universities And how do we make it right When Amy applied to university she thought she d be judged purely on her merits But she never thought that her family background would have as much impact on her future as her grades When KiKi arrived at university she knew she could be the only black woman in her class But she didn t know how out of place she would feel nor how unwelcoming her peers would be When Orry graduated from university he was told he d probably land a six figure salary But he wasn t told he d end up barely scraping a living wage struggling to feed his children Drawing on the stories of hundreds of American students *The Years That Matters Most* is a revelatory account of a university system in crisis Paul Tough bestselling author of *How Children Succeed* exposes a world where small town colleges go bust while the most prestigious raise billions every year where overstretched admissions officers are forced to pick rich candidates over smart ones where black and working class students are left to sink or swim on uncaring campuses Along the way he uncovers cutting edge research from the academics leading the way to a new kind of university one where students succeed not because of their background but because of the quality of their minds The result is a call to arms for universities that work for everyone and a manual for how we can make it happen

Meritocracy Trap Daniel Markovits,2019-09-10 This book flips your world upside down Daniel Markovits argues that

meritocracy isn't a virtuous efficient system that rewards the best and brightest. Instead, it rewards middle class families who can afford huge investments in their children's education. Frightening eye opening stuff. The Times Books of the Year. Even in the midst of runaway economic inequality and dangerous social division, it remains an axiom of modern life that meritocracy reigns supreme and promises to open opportunity to all. The idea that reward should follow ability and effort is so entrenched in our psyche that even as society divides itself at almost every turn, all sides can be heard repeating meritocratic notions. Meritocracy cuts to the heart of who we think we are. But what if both up and down the social ladder, meritocracy is a sham. Today meritocracy has become exactly what it was conceived to resist: a mechanism for the concentration and dynastic transmission of wealth and privilege across generations. Upward mobility has become a fantasy and the embattled middle classes are now more likely to sink into the working poor than to rise into the professional elite. At the same time, meritocracy now ensnares even those who manage to claw their way to the top, requiring rich adults to work with crushing intensity, exploiting their expensive educations in order to extract a return. All this is not the result of deviations or retreats from meritocracy, but rather stems directly from meritocracy's successes. This is the radical argument that *The Meritocracy Trap* prosecutes with rare force, comprehensive research and devastating persuasion. Daniel Markovits, a law professor trained in philosophy and economics, is better placed than most to puncture one of the dominant ideas of our age. Having spent his life at elite universities, he knows from the inside the corrosive system we are trapped within, as well as how we can take the first steps towards a world that might afford us both prosperity and dignity.

Cognitive Sciences and Education in Non-WEIRD Populations Marcus Vinicius Alves, Roberta Ekuni, Maria Julia Hermida, Juan Valle-Lisboa, 2022-08-27. This book aims to present theoretical and practical innovations in the cognitive sciences and education fields, focusing on studies and research conducted with non-WEIRD, i.e. western educated industrialized rich and democratic populations, especially from Latin America. Cognitive sciences and neuroscience have increased exponentially their knowledge in the last three decades, and today there is a corpus of knowledge about our central nervous system and its functioning that adequately understood has promising contributions for the educational field. Most of this knowledge, however, comes from central countries: North America, Europe, and is based on studies conducted on what has been called WEIRD populations. Much less is known about how the integration of cognitive sciences and neuroscience could impact education in non-WEIRD populations, which represent the great majority of the world's population and have quite diverse cultural and social characteristics. So the main aim of this book is to present a non-WEIRD scientific approach to problems in the cognitive sciences, neuroscience, and education fields. Research presented in this contributed volume takes advantage of the diverse populations that characterize developing countries to explore how underrepresented populations learn, what works, and what does not, for cognitive science and education, not only for the developing world but also for understanding diversity in the whole world. Departing from this focus on diversity, chapters in this book present studies on theories, beliefs, and misconceptions about the relationship

between cognitive sciences and education child and adolescent cognitive development mathematics and language academic performance and cognitive interventions to improve educational practice Cognitive Sciences and Education in Non WEIRD Populations A Latin American Perspective will be a useful resource for both cognitive scientists and educational researchers interested in developing a more culturally sensitive approach to basic and applied research on cognitive sciences of education
