The history of mathematics education is an interdisciplinary research area that is experiencing a significant development and this book presents recent work in this area. This book is the result of the seventh conference ICHME International Conference on the History of Mathematics Education that took place at Erbacher Hof Mainz Germany from 19th to 23rd of September 2022. Nowadays the history of education is of the utmost importance for assessing the general development of the educational system s in which mathematics education occurs. Usually the history of education is confined to history within a given civilization country or nation. However the quality of the research for a given nation is enhanced when situated among various specific cases and comparative studies provide essential tools to broaden the perspectives to an international level. Moreover mathematics as a school discipline has always functioned at the crossroads between general education and professional training thus relating its teaching history to professional working environments as well. The 24 chapters in this book reflect this wide area of research.

Network Spread Models of Neurodegenerative Diseases Ashish Raj, Yasser Iturria Medina, 2019-04-18. It is a real pleasure to introduce the excellent papers contributed by leading experts to our Research Topic proposing various network models of dementia spread. The focus is strongly on disease specific mathematical modeling rather than general graph theory. The emerging field of network neuroscience visualizes the brain as a graph consisting of nodes representing regions and edges as connections between them. This complex network supports efficient communication along neural projections but also unfortunately the transmission and progression of Alzheimer s and other neurodegenerative disorders. If we could know the brain s network organization could we then predict how degenerative processes might develop on this network. As these papers demonstrate the answer is increasingly yes.
