Benjamin, 2013-06-18 Understanding how memories are induced and maintained is one of the major outstanding questions in modern neuroscience. This is difficult to address in the mammalian brain due to its enormous complexity and invertebrates offer major advantages for learning and memory studies because of their relative simplicity. Many important discoveries made in invertebrates have been found to be generally applicable to higher organisms and the overarching theme of the proposed will be to integrate information from different levels of neural organization to help generate a complete account of learning and memory. Edited by two leaders in the field, *Invertebrate Learning and Memory* will offer a current and comprehensive review with chapters authored by experts in each topic. The volume will take a multidisciplinary approach exploring behavioral, cellular, genetic, molecular, and computational investigations of memory. Coverage will include comparative cognition at the behavioral and mechanistic level, developments in concepts and methodologies that will underlie future advancements, and mechanistic examples from the most important vertebrate systems: nematodes, molluscs, and insects. Neuroscience researchers and graduate students with an interest in the neural control of cognitive behavior will benefit as will as will those in the field of invertebrate learning. Presents an overview of invertebrate studies at the molecular, cellular, neural levels, and correlates findings to mammalian behavioral investigations. Linking multidisciplinary approaches allows for full understanding of how molecular changes in neurons and circuits underpin behavioral plasticity. Edited work with chapters authored by leaders in the field around the globe, the broadest most expert coverage available. Language Electrified Mirko Grimaldi, Elvira Brattico, Yury Shtyrov, 2023-09-04 Language as a system we use to communicate represents the brain's biologically perfected machinery for converting thoughts, ideas, concepts, and reflections of both the outside world and our inner feelings into words and sentences. Crucially, this process occurs in real time. How hundreds of billions of neurons within the dark of the skull control language

and speech remains in some respects a mystery To track such neural dynamics in time we need to exploit physiological tools capable of following temporal patterns of neural activity on a fine grain time scale In parallel it is necessary to begin to provide a real interdisciplinary academic background for scholars wishing to embark on this field of study Unlike many similar efforts this book has been conceived as a hands on tool offering the reader the possibility to progressively acquire principles techniques and methods necessary to pursue interdisciplinary research in a fascinating field intersecting linguistic and neuroscience It focuses on neurophysiological methods and applications useful to track the high speed and rapid temporal dynamics of neural activity involved in language and speech The chapters in this book are organized into four parts Part One discusses neural principles and tools for an effective approach to the field of investigation Part Two looks at the issues and perspectives concerned with the use of a range of neurophysiological technologies to investigate the neural computations of language and speech processes Part Three focuses on an in depth exploration of the neural processes associated with the main types of linguistic information ranging from phonemes and prosody to syntax pragmatics and figurative language Lastly Part Five explores the phenomena that goes beyond the segments of basic linguistic units In the Neuromethods series style chapters include the kind of detail and key advice from the specialists needed to get successful results in your laboratory Cutting edge and thorough Language Electrified Principles Methods and Future Perspectives of Investigation is a valuable resource that offers the necessary tool box for all researchers and scientists interested in the challenging field of the neurophysiology of language and speech **U.S. Government Research Reports** ,1964
