The Oxford Handbook of Integrative Health Science Carol D. Ryff, Robert F. Krueger, 2018 Most health research to date has been pursued within the confines of scientific disciplines that are guided by their own targeted questions and research strategies Although useful such inquiries are inherently limited in advancing understanding the interplay of wide ranging factors that shape human health The Oxford Handbook of Integrative Health Science embraces an integrative approach that seeks to put together sociodemographic factors age gender race socioeconomic status known to contour rates of morbidity and mortality with psychosocial factors emotion cognition personality well being social connections behavioral factors health practices and stress exposures caregiving responsibilities divorce discrimination also known to influence health A further overarching theme is to explicate the biological pathways through which these various effects occur The biopsychosocial leitmotif that inspires this approach demands new kinds of studies wherein wide ranging

assessments across different domains are assembled on large population samples The MIDUS Midlife in the U S national longitudinal study exemplifies such an integrative study and all findings presented in this collection draw on MIDUS The way the study evolved via collaboration of scientists working across disciplinary lines and its enthusiastic reception from the scientific community are all part of the larger story told Embedded within such tales are important advances in the identification of key protective or vulnerability factors these pave the way for practice and policy initiatives seeking to improve the nation s health

Understanding Racial and Ethnic Differences in Health in Late Life National Research Council, Division of Behavioral and Social Sciences and Education, Committee on Population, Panel on Race, Ethnicity, and Health in Later Life, 2004-09-08 As the population of older Americans grows it is becoming more racially and ethnically diverse Differences in health by racial and ethnic status could be increasingly consequential for health policy and programs Such differences are not simply a matter of education or ability to pay for health care For instance Asian Americans and Hispanics appear to be in better health on a number of indicators than White Americans despite on average lower socioeconomic status The reasons are complex including possible roles for such factors as selective migration risk behaviors exposure to various stressors patient attitudes and geographic variation in health care This volume produced by a

multidisciplinary panel considers such possible explanations for racial and ethnic health differentials within an integrated framework It provides a concise summary of available research and lays out a research agenda to address the many uncertainties in current knowledge It recommends for instance looking at health differentials across the life course and deciphering the links between factors presumably producing differentials and biopsychosocial mechanisms that lead to impaired health
