Riley,Thomas W. Rosanske,1996-05-29 The need to validate an analytical or bioanalytical method is encountered by analysts in the pharmaceutical industry on an almost daily basis because adequately validated methods are a necessity for approvable regulatory filings What constitutes a validated method however is subject to analyst interpretation because there is no universally accepted industry practice for assay validation This book is intended to serve as a guide to the analyst in terms of the issues and parameters that must be considered in the development and validation of analytical methods In addition to the critical issues surrounding method validation this book also deals with other related factors such as method development data acquisition automation cleaning validation and regulatory considerations The book is divided into three parts Part One comprising two chapters looks at some of the basic concepts of method validation Chapter 1 discusses the general concept of validation and its role in the process of transferring methods from laboratory to laboratory Chapter 2 looks at some of the critical parameters included in a validation program and the various statistical treatments given to these parameters Part Two Chapters 3 4 and 5 of the book focuses on the regulatory perspective of analytical validation Chapter 3 discusses in some detail how validation is treated by various regulatory agencies around the world including the United States Canada the European Community Australia and Japan This chapter also discusses the International Conference on Harmonization ICH treatment of assay validation Chapters 4 and 5 cover the issues and various perspectives of the recent United States vs Barr Laboratories Inc case involving the retesting of samples Part Three Chapters 6 12 covers the development and validation of various analytical components of the pharmaceutical product development process This part of the book contains specific chapters dedicated to bulk drug substances and finished products dissolution

studies robotics and automated workstations biotechnology products biological samples analytical methods for cleaning procedures and computer systems and computer aided validation Each chapter goes into some detail describing the critical development and related validation considerations for each topic This book is not intended to be a practical description of the analytical validation process but more of a guide to the critical parameters and considerations that must be attended to in a pharmaceutical development program Despite the existence of numerous guidelines including the recent attempts by the ICH to be implemented in 1998 the practical part of assay validation will always remain to a certain extent a matter of the personal preference of the analyst or company Nevertheless this book brings together the perspectives of several experts having extensive experience in different capacities in the pharmaceutical industry in an attempt to bring some consistency to analytical method development and validation

Validation Analytical Methods: Method SHRIVASTAVA,2014-01-31 *Evaluation and Application of Best Practice in Analytical Method Validation* Ghulam Shabir,2008 The coherent body of research described in the existing published work is concerned with new assay method development and validation using novel systematic approaches for pharmaceutical and diagnostic compounds The first stage of the research was to study how analytical method development and validation are typically carried out at present and to formulate this into a simple step by step approach Such a template and protocol was not only used as the foundation of this research programme but could also serve as a simple systematic guide for other practitioners and those new to the field Furthermore it was recognised that this protocol should satisfy the requirements of the most strategically important regulatory agencies The second stage of this research involved evaluation and application of the above validation approach to new methods that were developed for a diverse range of analytes and samples A new purity assay for 1 10 phenanthroline 5 6 dione and 4 7 phenanthroline 5 6 dione using high performance liquid chromatography HPLC was developed and validated Impurities in these compounds were identified by liquid chromatography mass spectrometry LCMS Best practice in method development and validation is equally important in the analysis of both active components and excipients in formulated products In the first case a liquid chromatography assay method for determining the content of 2 diethylamino N 2 6 dimethylphenyl acetamide in a gel formulation was developed and validated In the second case the individual contents of three phydroxy benzoic acid ester preservatives in a complex multi component sample were determined following the development and validation of a liquid chromatography method Finally the validation approach was evaluated as applied to another analytical technique Here gas chromatography GC successfully used to develop a novel assay for p cymene in tea tree oil formulations presented different analytical problems because of the very

complex nature of this natural product Stability study information to increase the shelf life of the product and validation data for the analytical method for p cymene content was critically evaluated iv In essence the critical review of the requirements for method validation for various agencies and the subsequent preparation of guidelines on how to go about method validation have had a significant impact on how analytical practitioners worldwide go about method development and more importantly method validation Further it was possible to apply these guidelines to conduct a series of effective successful method validation for assays involving a range of typical pharmaceutical samples

Guideline for Submitting Samples and Analytical Data for Methods Validation ,1987 **Validation in Chemical Measurement** Paul De Bièvre,Helmut Günzler,2005-01-12 The validation of analytical methods is based on the characterisation of a measurement procedure selectivity sensitivity repeatability reproducibility This volume collects 31 outstanding papers on the topic mostly published in the period 2000 2003 in the journal Accreditation and Quality Assurance They provide the latest understanding and possibly the rationale why it is important to integrate the concept of validation into the standard procedures of every analytical laboratory In addition this anthology considers the benefits to both the analytical laboratory and the user of the measurement results
