Ana Maths Exemplars Grade 6 2013:

Amenability of Discrete Groups by Examples Kate Juschenko, 2022-06-30 The main topic of the book is amenable groups i.e. groups on which there exist invariant finitely additive measures. It was discovered that the existence or non-existence of amenability is responsible for many interesting phenomena such as e.g. the Banach Tarski Paradox about breaking a sphere into two spheres of the same radius. Since then amenability has been actively studied and a number of different approaches resulted in many examples of amenable and non-amenable groups. In the book the author puts together main approaches to study amenability. A novel feature of the book is that the exposition of the material starts with examples which introduce a method rather than illustrating it. This allows the reader to quickly move on to meaningful material without learning and remembering a lot of additional definitions and preparatory results; those are presented after analyzing the main examples. The techniques that are used for proving amenability in this book are mainly a combination of analytic and probabilistic tools with geometric group theory. **Annual Report** South Africa. Department of Basic Education, 2016

Catalog of Federal Domestic Assistance, 2014 Identifies and describes specific government assistance opportunities such as loans, grants, counseling and procurement contracts available under many agencies and programs. **Democratic Evaluation and Democracy** Donna Podems, 2017-02-01 Democratic evaluation brings a way of thinking about evaluation's role in society and in particular its role in strengthening social justice. Yet the reality of applying it and what happens when it is applied particularly outside the West is unclear. Set in South Africa, a newly formed democracy in Southern Africa, the book affords an in-depth journey that immerses a reader into the realities of evaluation and its relation to democracy. The book starts with the broader introductory chapters that set the scene for more detailed ones which bring thorough insights into national government, local government and civil societies' experience of evaluation, democratic evaluation and their understanding of how it contributes to strengthening democracy or not. A teaching case, the book concludes by providing guiding questions that encourage reflection, discussion and learning that ultimately aims to inform practice and theory.

Higher Genus Curves in Mathematical Physics and Arithmetic Geometry Andreas Malmendier, Tony Shaska, 2018-04-03 This volume contains the proceedings of the AMS Special Session on Higher Genus Curves and Fibrations in Mathematical Physics and Arithmetic Geometry held on January 8, 2016, in Seattle, Washington. Algebraic curves and their fibrations have played a major role in both mathematical physics and arithmetic geometry. This volume focuses on the role of higher genus curves in particular hyperelliptic and superelliptic curves in algebraic geometry and mathematical physics. The articles in this volume investigate the automorphism groups of curves and superelliptic curves and results regarding integral points on curves and their applications in mirror symmetry. Moreover, geometric subjects are addressed such as elliptic 3-surfaces over the rationals, the birational type of Hurwitz spaces and links between projective geometry and abelian functions.

Algebraic Geometry: Salt Lake City 2015 Richard Thomas, 2018-06-01 This is Part 2 of a two-volume set. Since Oscar

Zariski organized a meeting in 1954 there has been a major algebraic geometry meeting every decade Woods Hole 1964 Arcata 1974 Bowdoin 1985 Santa Cruz 1995 and Seattle 2005 The American Mathematical Society has supported these summer institutes for over 50 years Their proceedings volumes have been extremely influential summarizing the state of algebraic geometry at the time and pointing to future developments The most recent Summer Institute in Algebraic Geometry was held July 2015 at the University of Utah in Salt Lake City sponsored by the AMS with the collaboration of the Clay Mathematics Institute This volume includes surveys growing out of plenary lectures and seminar talks during the meeting Some present a broad overview of their topics while others develop a distinctive perspective on an emerging topic Topics span both complex algebraic geometry and arithmetic questions specifically analytic techniques enumerative geometry moduli theory derived categories birational geometry tropical geometry Diophantine questions geometric representation theory characteristic and adic tools etc The resulting articles will be important references in these areas for years to come
