million specimens His classification and reclassification of Cynips led to the speciation of the genus that remains today During his graduate training Kinsey developed a strong interest in evolution and the links between entomological and human behavior studies In 1920 he joined Indiana University as a professor in zoology and soon published an introductory text on biology followed by a coauthored field guide to edible wild plants In 1938 Kinsey began teaching a noncredit course on marriage where he openly discussed sexual behavior and espoused equal opportunity for orgasmic satisfaction in marital relationships Soon after he began gathering case histories of sexual behavior As a pioneer in the nascent field of sexology Kinsey saw that the key to its cogency was grounded in observation combined with the collection and classification of mass data To support the institutionalization of his work he cofounded the Institute for Sex Research at Indiana University in 1947 He and his staff eventually conducted over eighteen thousand personal interviews about sexual behavior and in 1948 he published Sexual Behavior in the Human Male to be followed in 1953 by Sexual Behavior in the Human Female As Drucker's study shows Kinsey's scientific rigor and his early use of data recording methods and observational studies were unparalleled in his field Those practices shaped his entire career and produced a wellspring of new information whether he was studying gall wasp wings writing biology textbooks tracing patterns of evolution or developing a universal theory of human sexuality
