 Bungale S. Taranath,2016-04-19 As software skills rise to the forefront of design concerns the art of structural conceptualization is often minimized Structural engineering however requires the marriage of artistic and intuitive designs with mathematical accuracy and detail Computer analysis works to solidify and extend the creative idea or concept that might have started out as a sketch on the back of an envelope From Sketches on the Back of an Envelope to Elegant Economical Buildings The Art of Structural Conceptualization Bridging the gap between the conceptual approach and computer analysis Structural Analysis and Design of Tall Buildings Steel and Composite Construction integrates the design aspects of steel and composite buildings in one volume Using conceptual thinking and basic strength of material concepts as foundations the book shows engineers how to use imperfect information to estimate the answer to larger and more complex design problems by breaking them down into more manageable pieces Written by an accomplished structural engineer this book discusses the behavior and design of lateral load resisting systems the gravity design of steel and composite floors and columns and methods for determining wind loads It also examines the behavior and design of buildings subject to inelastic cyclic deformation during large earthquakes with an emphasis on visual and descriptive analysis as well as the anatomy of seismic provisions and the rehabilitation of seismically vulnerable steel buildings Intuitive Techniques for Construction and Design The book covers a range of special topics including performance based design and human tolerance for the wind induced dynamic motions of tall buildings It also presents preliminary analysis techniques graphical approaches for determining wind and seismic loads and graphical aids for estimating unit quantity of structural steel The final chapter deals with the art of connection design Forty case studies from New York s Empire State Building to Kuala Lumpur s Petronas Towers highlight the aspects of conceptualization that are key in the design of tall and ultra tall buildings A comprehensive design reference this book guides engineers to visualize conceptualize and realize structural systems for tall buildings that are elegant and economical **Design of Joints in Steel and Composite Structures** ECCS - European Convention for Constructional Steelwork,2016-06-22 This book details the basic concepts and the design rules included in Eurocode 3 Design of steel structures Part 1 8 Design of joints Joints in composite construction are also addressed through references to Eurocode 4 Design of composite steel and concrete structures Part 1 1 General rules and rules for buildings Attention has to be duly paid to the joints when designing a steel or composite structure in terms of the global safety of the construction and also in terms of the overall cost including fabrication transportation and erection Therefore in this book the design of the joints themselves is widely detailed and aspects of selection of joint configuration and integration of the joints into the analysis and the design process of the whole construction are also fully covered Connections using mechanical fasteners welded connections simple joints moment resisting joints and lattice girder joints are considered Various joint configurations are treated including beam to column beam to beam column bases and beam and column splice configurations under

different loading situations axial forces shear forces bending moments and their combinations The book also briefly summarises the available knowledge relating to the application of the Eurocode rules to joints under fire fatigue earthquake etc and also to joints in a structure subjected to exceptional loadings where the risk of progressive collapse has to be mitigated Finally there are some worked examples plus references to already published examples and to design tools which will provide practical help to practitioners

Second-order Analysis of Imperfect Light-weight and Composite Structures Man Fong,Hong Kong Polytechnic University. Department of Civil and Structural Engineering,2012 Convenience and reliability in design of steel structures especially for angle members are another attraction for second order analysis and design method The monosymmetric or asymmetric section property and eccentric connection in angle members further complicates its design process and many design codes provide different complex equations to consider these effects which can be simulated automatically in analysis model in the proposed method so that the design process can be much simplified Steel members have been popularly used in different structural forms Due to the increase of building height and structural span the use of steel concrete composite members becomes more popular because of its advantages over bare steel and reinforced concrete members Most nonlinear finite element packages are complicated and unsuitable for practical design because of the requirement of huge computational time Therefore an efficient and accurate analysis and design method which includes the nonlinear effects and fulfills code requirement is proposed for steel concrete composite members with verification examples to confirm its validity for practical applications Consideration of material nonlinearity in study of inelastic behavior of composite members is obviously important and the second order inelastic analysis is proposed in the final part of the thesis to include both the geometric and material nonlinearities in analysis Refined plastic hinge method in conjunction with initial and full yield surfaces is used to trace material yield for guaranteeing both efficiency and accuracy In this thesis extensive numerical examples are provided for verification Modeling Steel and Composite Structures Pedro Vellasco,Sebastiao Arthur Lopes de Andrade,Luciano Rodrigues Ornelas de Lima,Marley Maria Bernardes Rebuzzi Vellasco,Luis Alberto Proenca Simoes da Silva,2017-05-23 Modeling Steel and Composite Structures explains the computational tools methods and procedures used to

design steel and composite structures The reference begins with the main models used to determine structural behavior This is followed by a detailed description of experimental models and their main requirements and care Numerous simulations presenting non linear response are illustrated as are their restrictions in terms of boundary conditions main difficulties solution strategies and methods adopted to surpass convergence difficulties In addition examples of the use of computational intelligence methods to simulate steel and composite structures response are presented Includes numerical models based in the finite element method Provides numerous simulations presenting a non linear response Contains examples of the use of computational intelligence methods to simulate steel and composite structures
