

# REPRODUCTIVE SYSTEM

## Lecture 19

### Reproductive System

- The reproductive system is a collection of organs and a network of hormone production that work together to create life.

#### Functions of the Reproductive System

- Production of Gametes
  - » Gametes are reproductive cells, produced by the gonads (male and female)
    - › Male gonads are called Testes which produce Sperm cells.
    - › Female gonads are called Ovaries which produce Egg cells or Oocytes.
- Fertilization
  - » Process by which the sperm and egg cells meet.
- Development and nourishment of a new individual
  - » Development of fetus once fertilization happens.
  - » Nourishment is through breastfeeding after birth.
- Production of Reproductive Hormones
  - » Hormones control the development of sex-specific body forms, routine functions of the reproductive system, and reproductive behavior.
    - › Male produces Testosterone
    - › Female produces Estrogen and Progesterone.

### Male Reproductive System

### Testes

- Small ovoid organs inside the Scrotum.
- Both exocrine and endocrine glands.
  - » Its exocrine has a duct that secretes sperm cells out of the body
  - » Its endocrine has no duct and directs Testosterone into the bloodstream.
- Produces Testosterone (hormone).

#### Structure of the Testes

|                      |                                                                                      |
|----------------------|--------------------------------------------------------------------------------------|
| Tunica Vaginalis     | The white part of the testes is a serous membrane consisting of squamous epithelium. |
| Tunica Albuginea     | Also a white fibrous connective tissue capsule that surrounds each testis.           |
| Septa                | Extensions into testis, dividing it into lobules.                                    |
| Lobules              | Contain seminiferous tubules.                                                        |
| Seminiferous Tubules | Where sperm cells are developed.                                                     |
| Interstitial Cells   | Also called Leydig cells, produces testosterone hormone.                             |

- The combined length of the seminiferous tubules in both testes is nearly half a mile.
- Tubuli Recti
  - » The seminiferous tubules empty into a set of short straight tubules.
- Rete Testis
  - » These in turn empty into a tubular network.
- Efferent Ductules
