Hartmann, Nikos Prantzos, 2010-10-01 This book introduces the reader to the field of nuclear astrophysics i.e. the acquisition and reading of measurements on unstable isotopes in different parts of the universe The authors explain the role of radioactivities in astrophysics discuss specific sources of cosmic isotopes and in which special regions they can be observed More specifically the authors address stars of different types stellar explosions which terminate stellar evolutions and other explosions triggered by mass transfers and instabilities in binary stars They also address nuclear reactions and transport processes in interstellar space in the contexts of cosmic rays and of chemical evolution A special chapter is dedicated to the solar system which even provides material samples The book also contains a description of key tools which astrophysicists employ in those particular studies and a glossary of key terms in astronomy with radioactivities Data Sources, 2000

Astrophysics with Radioactive Isotopes Roland Diehl, Dieter H. Hartmann, Nikos Prantzos, 2018-10-11 Dealing with astrophysics derived from the radiation emitted by radioactive atomic nuclei this book describes the different methods used to measure cosmic radio isotopes It demonstrates how this astronomical window has contributed to the understanding of the sources and the chemical evolution of cosmic gas Reference materials and explanations are included for students in advanced stages of their education Nuclear reactions in different sites across the universe lead to the production of stable and unstable nuclei Their abundances can be measured through different methods allowing to study the various nuclear processes taking place in cosmic environments Nucleosynthesis is the cosmic formation of new nuclear species starting from hydrogen and helium resulting from the big bang origins Stars create and eject synthesized nuclei during their evolution and explosions Incorporation of the new interstellar composition into next generation stars characterises the compositional chemical evolution of cosmic gas in and between galaxies Radioactive species have unique messages about how this occurs Since the first Edition of this book published in 2011 with the title Astronomy with Radioactivities long awaited new direct observations of supernova radioactivity have been made and are now addressed in two updated chapters dealing with supernovae In this second Edition the advances of recent years beyond one dimensional treatments of stellar structure and stellar explosions towards 3 dimensional models have been included and led to significant re writings in Chapters 3 5 The sections on the Solar System origins have been re written to account for new insights into the evolution of giant molecular clouds The chapter on diffuse radioactivities now also includes material measurements of radioactivities in the current solar system and their interpretations for recent nucleosynthesis activity in our Galaxy Significant new results on gamma rays from positron annihilations have been accounted for in that chapter and led to new links with nucleosynthesis sources as well as interstellar transport processes A new chapter now provides a description of interstellar processes often called chemical evolution thus linking the creation of new nuclei to their abundance observations in gas and stars The experimental instrumental chapters on nuclear reaction measurements on gamma ray telescopes and pre solar grain laboratories have been updated Moreover new windows of astronomy that have been opened up in recent years have been included in the discussions of the multi messenger approach that broadens the basis for astrophysical insights

Evolution of transporters in plants Heven Sze, Angus S. Murphy, Markus Geisler, 2014-05-30 In the past decade many plant genomes have been completely sequenced ranging from unicellular alga to trees This rich resource of information raises questions like How did specific transporters evolve as early plants adapted to dry land How did the evolution of transporters in monocot plants differ from that in dicots What are the functional orthologs in food and energy crops of transporters characterized in model plants How do we name the new genes proteins Phylogenetic analyses of transport proteins will shed light on these questions and potentially reveal novel insights for future studies to understand plant nutrition stress tolerance biomass production signaling and development
