A Study in Derived Algebraic

Geometry Dennis Gaitsgory, Nick Rozenblyum, 2019-12-31 Derived algebraic geometry is a far reaching generalization of algebraic geometry. It has found numerous applications in various parts of mathematics most prominently in representation theory. This volume develops the theory of ind coherent sheaves in the context of derived algebraic geometry. Ind coherent sheaves are a renormalization of quasi coherent sheaves and provide a natural setting for Grothendieck Serre duality as well as geometric incarnations of numerous categories of interest in representation theory. This volume consists of three parts and an appendix. The first part is a survey of homotopical algebra in the setting of infinity categories and the basics of derived algebraic geometry. The second part builds the theory of ind coherent sheaves as a functor out of the category of correspondences and studies the relationship between ind coherent and quasi coherent sheaves. The third part sets up the general machinery of the $\mathrm{infty}\text{-}\mathrm{2}\mathrm{cat}$ category of correspondences needed for the second part. The category of correspondences via the theory developed in the third part provides a general framework for Grothendieck's six functor formalism. The appendix provides the necessary background on $\mathrm{infty}\text{-}\mathrm{2}\mathrm{cat}$ categories needed for the third part.
