Theory Of Clean Rings And Matrices Huanyin Chen,Marjan Sheibani Abdolyousefi,2022-08-30 This is the first monograph devoted to clean ring and matrix theory It aims to study a theory of expressing an element in a ring as the sum of some special ones such as idempotents units nilpotents tripotents involutions etc A matrix over such rings is thereby expressed as the sum of some special matrices Also another topics on the behaviors of topological properties and properties of such rings are investigated The book is based on the results of various published papers particularly by the authors It is accessible for students familiar with general abstract algebra while the topics are interesting for researchers in the field of ring matrix and operator theory

Functional Analysis in Interdisciplinary Applications—II Allaberen Ashyralyev,Tynysbek Sh. Kalmenov,Michael V. Ruzhansky,Makhmud A. Sadybekov,Durvudkhan Suragan,2021-07-03 Functional analysis is an important branch of mathematical analysis which deals with the transformations of functions and their algebraic and topological properties Motivated by their large applicability to real life problems applications of functional analysis have been the aim of an intensive study effort in the last decades yielding significant progress in the theory of functions and functional spaces differential and difference equations and boundary value problems differential and integral operators and spectral theory and mathematical methods in physical and engineering sciences The present volume is devoted to these investigations The publication of this collection of papers is based on the materials of the mini symposium Functional Analysis in Interdisciplinary Applications organized in the framework of the Fourth International Conference on Analysis and Applied Mathematics ICAAM 2018 September 6 9 2018 Presenting a wide range of topics and results this book will appeal to anyone working in the subject area including researchers and students interested to learn more about different aspects and applications of functional analysis Many articles are written by experts

from around the world strengthening international integration in the fields covered The contributions to the volume all peer reviewed contain numerous new results This volume contains four different chapters The first chapter contains the contributed papers focusing on various aspects of the theory of functions and functional spaces The second chapter is devoted to the research on difference and differential equations and boundary value problems The third chapter contains the results of studies on differential and integral operators and on the spectral theory The fourth chapter is focused on the simulation of problems arising in real world applications of applied sciences

Foundations of Commutative Rings and Their Modules Fanggui Wang,Hwankoo Kim,2024-09-02 This book provides an introduction to the foundations and recent developments in commutative algebra A look at the contents of the first five chapters shows that the topics covered are those usually found in any textbook on commutative algebra However this book differs significantly from most commutative algebra textbooks namely in its treatment of the Dedekind Mertens formula the small finitistic dimension of a ring Gorenstein rings valuation overrings the valuative dimension and the Nagata rings Chapter 6 goes on to present w modules over commutative rings as they are most commonly used in torsion theory and multiplicative ideal theory Chapter 7 deals with multiplicative ideal theory over integral domains Chapter 8 collects various results of pullbacks especially Milnor squares and D/M constructions which are probably the most important example generating machines In Chapter 9 coherent rings of finite weak global dimensions are probed and the local ring of weak global dimension two is elaborated by combining homological tricks and methods of star operation theory Chapter 10 is devoted to the Grothendieck group of a commutative ring In particular the Bass Quillen problem is discussed Finally Chapter 11 introduces relative homological algebra especially where the related notions of integral domains appearing in classical ideal theory are defined and studied using the class of Gorenstein projective modules In Chapter 12 in this new edition properties of cotorsion theories are introduced and show for any cotorsion pair how to construct their homology theory Each section of the book is followed by a selection of exercises of varying difficulty This book appeals to a wide readership from graduate students to academic researchers interested in studying commutative algebra
