

ALGEBRA I FINAL EXAM

Directions: Choose the best answer for each question.

1. Find the difference of the polynomials.

$$(3x^2 - 2xy + y^2) - (-5x^2 + 6xy - y^2)$$

- a. $2x^2 - 3xy$
- b. $8x^2 - 11xy$
- c. $2x^2 - 3xy + 2y$
- d. $8x^2 - 8xy + 2y^2$

3. Find the product.

$$(5x - 3y)(6x + y)$$

- a. $30x^2 + 23xy + 3y^2$
- b. $30x^2 - 13xy - 3y^2$
- c. $35x - xy - 4y^2$
- d. $15x^2 - 23xy - 3y^2$

5. What property is represented below?

$$6 \cdot (3 \cdot 2) = (3 \cdot 2) \cdot 6$$

- a. commutative property
- b. identity property
- c. inverse property
- d. associative property

7. Find the roots of the quadratic function.

$$f(x) = 6x^2 - 5x - 2$$

- a. $x = 6; x = -2$
- b. $x = \frac{5 \pm \sqrt{13}}{2}$
- c. $x = 1 \pm \sqrt{73}$
- d. $x = \frac{5 \pm \sqrt{73}}{12}$

2. Which inequality best represents the graph?

- a. $y < \frac{2}{3}x + 1$
- b. $y \leq \frac{2}{3}x + 1$
- c. $y \geq \frac{2}{3}x + 1$
- d. $y < -\frac{3}{2}x + 1$

4. Jeffrey bought a collectable baseball card for \$12. If the value of the card appreciated by 9.4% each year, how much will the card be worth in 7 years?

- a. \$22.51
- b. \$112.80
- c. \$1,241.06
- d. \$39.27

6. Evaluate the expression when $x = 2$ and $y = -3$.

$$3y^2 - 2(5x + 3) - 1$$

- a. 0
- b. -3
- c. 10
- d. -4

8. Find the solution to the system of linear equations below.

$$\begin{aligned} 6x - 5y &= 1 \\ y &= 2x - 1 \end{aligned}$$

- a. $(-1, 3)$
- b. $(1, 1)$
- c. $(1, 2)$
- d. $(0, 2)$

Algebra 1 Form G Answers:

Solutions Manual for Lang's Linear Algebra Rami Shakarchi, 2012-12-06 The present volume contains all the exercises and their solutions of Lang's Linear Algebra Solving problems being an essential part of the learning process my goal is to provide those learning and teaching linear algebra with a large number of worked out exercises Lang's textbook covers all the topics in linear algebra that are usually taught at the undergraduate level vector spaces matrices and linear maps including eigenvectors and eigenvalues determinants diagonalization of symmetric and hermitian maps unitary maps and matrices triangulation Jordan canonical form and convex sets Therefore this solutions manual can be helpful to anyone learning or teaching linear algebra at the college level As the understanding of the first chapters is essential to the comprehension of the later more involved chapters I encourage the reader to work through all of the problems of Chapters I II III and IV Often earlier exercises are useful in solving later problems For example Exercise 35.3 of Chapter II shows that a strictly upper triangular matrix is nilpotent and this result is then used in Exercise 7.1 of Chapter X To make the solutions concise I have included only the necessary arguments the reader may have to fill in the details to get complete proofs Finally I thank Serge Lang for giving me the opportunity to work on this solutions manual and I also thank my brother Karim and Steve Miller for their helpful comments and their support

Matrix Algebra: Exercises and Solutions David A. Harville, 2011-06-27 This book comprises well over three hundred exercises in matrix algebra and their solutions The exercises are taken from my earlier book *Matrix Algebra From a Statistician's Perspective* They have been restated as necessary to make them comprehensible independently of their source To further insure that the restated exercises have this stand alone property I have included in the front matter a section on terminology and another on notation These sections provide definitions descriptions comments or explanatory material pertaining to certain terms and notational symbols and conventions from *Matrix Algebra From a Statistician's Perspective* that may be unfamiliar to a nonreader of that book or that may differ in generality or other respects from those to which he/she is accustomed For example the section on terminology includes an entry for scalar and one for matrix These are standard terms but their use herein and in *Matrix Algebra From a Statistician's Perspective* is restricted to real numbers and to rectangular arrays of real numbers whereas in various other presentations a scalar may be a complex number or more generally a member of a field and a matrix may be a rectangular array of such entities

Algebra IV A.I. Kostrikin, I.R. Shafarevich, 2012-12-06 Group theory is one of the most fundamental branches of mathematics This volume of the *Encyclopaedia* is devoted to two important subjects within group theory The first part of the book is concerned with infinite groups The authors deal with combinatorial group theory free constructions through group actions on trees algorithmic problems periodic groups and the Burnside problem and the structure theory for Abelian soluble and nilpotent groups They have included the very latest developments however the material is accessible to readers familiar with the basic concepts of algebra The second part treats the theory of linear groups It is a genuinely

encyclopaedic survey written for non specialists The topics covered include the classical groups algebraic groups topological methods conjugacy theorems and finite linear groups This book will be very useful to all mathematicians physicists and other scientists including graduate students who use group theory in their work , Robert Steinberg Collected Papers Robert Steinberg, 1997 This volume is a collection of papers by Robert Steinberg It contains all of his published papers on group theory including those on special representations now called Steinberg representations tensor products of representations finite reflection groups regular elements of algebraic groups Galois cohomology universal extensions etc At the end of the book there is a section called Comments on the Papers The comments by Steinberg explain how ideas and results have evolved and been used since they first appeared **Proceedings of the Conference on Categorical Algebra** S.

Eilenberg, D. K. Harrison, H. Röhrl, S. MacLane, 2012-12-06 This volume contains the articles contributed to the Conference on Categorical Algebra held June 7-12 1965 at the San Diego campus of the University of California under the sponsorship of the United States Air Force Office of Scientific Research Of the thirty seven mathematicians who were present seventeen presented their papers in the form of lectures In addition this volume contains papers contributed by other attending participants as well as by those who after having planned to attend were unable to do so The editors hope to have achieved a representative if incomplete coverage of the present activities in Categorical Algebra within the United States by bringing together this group of mathematicians and by soliciting the articles contained in this volume They also hope that these Proceedings indicate the trend of research in Categorical Algebra in this country In conclusion the editors wish to thank the participants and contributors to these Proceedings for their continuous cooperation and encouragement Our thanks are also due to the Springer Verlag for publishing these Proceedings in a surprisingly short time after receiving the manuscripts

Algebraic Groups and Number Theory Vladimir Platonov, Andrei Rapinchuk, Rachel Rowen, 1993-12-07 This milestone work on the arithmetic theory of linear algebraic groups is now available in English for the first time Algebraic Groups and Number Theory provides the first systematic exposition in mathematical literature of the junction of group theory algebraic geometry and number theory The exposition of the topic is built on a synthesis of methods from algebraic geometry number theory analysis and topology and the result is a systematic overview of almost all of the major results of the arithmetic theory of algebraic groups obtained to date **Fundamental Solutions of Linear Partial Differential Operators** Norbert

Ortner, Peter Wagner, 2015-08-05 This monograph provides the theoretical foundations needed for the construction of fundamental solutions and fundamental matrices of systems of linear partial differential equations Many illustrative examples also show techniques for finding such solutions in terms of integrals Particular attention is given to developing the fundamentals of distribution theory accompanied by calculations of fundamental solutions The main part of the book deals with existence theorems and uniqueness criteria the method of parameter integration the investigation of quasihyperbolic systems by means of Fourier and Laplace transforms and the representation of fundamental solutions of homogeneous

elliptic operators with the help of Abelian integrals In addition to rigorous distributional derivations and verifications of fundamental solutions the book also shows how to construct fundamental solutions matrices of many physically relevant operators systems in elasticity thermoelasticity hexagonal cubic elastodynamics for Maxwell s system and others The book mainly addresses researchers and lecturers who work with partial differential equations However it also offers a valuable resource for students with a solid background in vector calculus complex analysis and functional analysis Algebra Through Practice: Volume 3, Groups, Rings and Fields T. S. Blyth,E. F. Robertson,1984-08-20 Problem solving is an art central to understanding and ability in mathematics With this series of books the authors have provided a selection of worked examples problems with complete solutions and test papers designed to be used with or instead of standard textbooks on algebra For the convenience of the reader a key explaining how the present books may be used in conjunction with some of the major textbooks is included Each volume is divided into sections that begin with some notes on notation and prerequisites The majority of the material is aimed at the students of average ability but some sections contain more challenging problems By working through the books the student will gain a deeper understanding of the fundamental concepts involved and practice in the formulation and so solution of other problems Books later in the series cover material at a more advanced level than the earlier titles although each is within its own limits self contained **Commutative Algebra** Irena Peeva,2013-02-01 This contributed volume brings together the highest quality expository papers written by leaders and talented junior mathematicians in the field of Commutative Algebra Contributions cover a very wide range of topics including core areas in Commutative Algebra and also relations to Algebraic Geometry Algebraic Combinatorics Hyperplane Arrangements Homological Algebra and String Theory The book aims to showcase the area especially for the benefit of junior mathematicians and researchers who are new to the field it will aid them in broadening their background and to gain a deeper understanding of the current research in this area Exciting developments are surveyed and many open problems are discussed with the aspiration to inspire the readers and foster further research
