

Complex Inheritance and Human Heredity

section 1 Complex Patterns of Inheritance

Before You Read

Cats can look different from one another because of differences in their coats. On the lines below, describe differences you have seen in the coats of cats. Then read the section to learn more about complex inheritance patterns.

MAIN Idea

Complex inheritance of traits does not follow the inheritance patterns described by Mendel.

What You'll Learn

- the difference between sex-linked and sex-limited inheritance
- how environment can influence a trait

Read to Learn

Incomplete Dominance

Not all traits follow Mendel's rules. Some traits are not dominant or recessive. Sometimes, the heterozygous organism has a mixed phenotype. **Incomplete dominance** occurs when the heterozygous phenotype is an intermediate phenotype between the two homozygous phenotypes.

An example of incomplete dominance occurs in snapdragon flowers. Red-flowered snapdragons ($C^R C^R$) can be crossed with white-flowered snapdragons ($C^W C^W$) to produce offspring with pink flowers ($C^R C^W$). When heterozygous F_1 generation snapdragon plants ($C^R C^W$) self-fertilize, the offspring have a 1:2:1 ratio of red, pink, and white flowers.

Codominance

In Mendel's experiments with pea plants, heterozygous pea plants expressed only the dominant allele. **Codominance** occurs when a heterozygous organism expresses both alleles. Sickle-cell anemia is an example of codominance. People who are heterozygous for the sickle-cell trait have both normal and sickle-shaped cells. 

Mark the Text

Highlight each question head. Then highlight the answer to the question.

Reading Check

1. **Define** What is codominance?
