slicing and scaling where Archimedes uses the physical weights and balances to calculate spherical volume and is led to the invention of calculus areas by cut and paste leading to the Bolyai Gerwien theorem on squaring polygons areas by counting leading to the theory of continued fractions the efficient rational approximation of real numbers and Minkowski s theorem on convex bodies straight edge and compass constructions giving complete proofs including the transcendence of e and of the impossibility of squaring the circle duplicating the cube and trisecting the angle and finally to a construction of the Hausdorff Banach Tarski paradox that shows some spherical sets are too complicated and cloudy to admit a well defined notion of area
