5	Valve timing control (VTC) solenoid

This system is an electronically controlled camshaft timing system that allows variable timing for the camshaft.

The valves are driven by a timing chain. The timing chain drives the inlet camshaft timing control unit and the outlet camshaft timing control unit. The timing chain is tensioned using a timing chain tensioner.

The inlet camshaft timing control unit is connected to the active camshaft position (CMP) sensor. The CMP sensor is located inside the valve cover.

Timing chain replacement does not require the variable camshaft timing control unit to be disconnected.

A special tool is needed to fix the camshafts in the adjustment position.

Remember that this special tool must not be used to keep the camshaft from rotating when mounting the camshaft sprocket. They may only be kept from rotating by using the hexagon, which has been specially provided for this purpose.

Advantages of variable camshaft timing (VCT):

- Lower fuel consumption due to improved volumetric efficiency
