Safety belts

All vehicle occupants, including those in the rear, must buckle up – even if it's just a short trip. For the best possible protection by the seat belts and airbags, the seat position must be close to the steering wheel or the instrument panel. Keep the seats in an upright position and make sure that the belts are fixed properly to the height of you and your passengers. Keep your feet on the floor at all times.

Safety belt position/Head restraint position

The shoulder belt must rest over the middle of the shoulder. The top portion of the safety belt must fit snugly across the pelvis. Both portions of the safety belt must fit tightly. The upper edge of the head restraint should be at eye level or higher.

Seat position and distance to steering wheel

Always adjust the driver's seat to the steering wheel so that there is a minimum of 10 inches (25 cm) between your kneecaps and the steering wheel. Otherwise, the airbag system cannot protect you properly in the event of an accident and can increase your risk of serious personal injury and death.

Safety belt height adjustment

Make the adjustment up/down to adjust the height. After you've adjusted the safety belt height, pull on the belt one more time to make sure the adjuster is locked into place.

Note: Always buckle up before your vehicle starts moving and always unbuckle when the vehicle stops. Always wear your seat belt and adjust the seat belt to fit you properly. Follow the instructions on the label attached to the seat belt.
