Hormonal Theory Andrea Ford, Roslyn Malcolm, Sonja Erikainen, Lisa Raeder, Celia Roberts, 2024-03-07 From angiotensin to cortisol, testosterone to xenoestrogens and dopamine to endocrine disruptors, hormones are everywhere. These chemical entities are foundational to biological life and shape social, cultural, and political forces while simultaneously being shaped by them. Hormones are increasingly central, not only to medical and other body-shaping practices and contemporary science but also environmentally oriented conversations. Throughout *Hormonal Theory*, authors trace how biomedical, social, political, and experiential forces entangle to produce hormones as we know them today. It illuminates how hormones emerge and exist as complex entities that permeate every sphere of our lives. Each glossary entry takes a particular hormonal compound as its starting point yet works to elaborate and complicate understandings of hormones as distinct biological or chemical entities. The entries collectively show how hormones never operate in isolation from other hormones nor bodies in isolation from other human and non-human bodies and their socio-ecological surroundings. Indeed, they cascade into one another. This volume then is not simply a qualitatively rich companion to medical knowledge about hormones but a challenge to the conceptual underpinnings of current dominant understandings of disease, wellness, and normalcy.

New powertrain designs, alternative fuels, advanced materials, and significant changes to the vehicle body are being driven by increasingly stringent fuel economy and greenhouse gas emission standards. By the end of the next decade, cars and light-duty trucks will be more fuel efficient, weigh less, emit less air pollutants, have more safety features, and will be more expensive to purchase relative to current vehicles. Though the gasoline-powered spark ignition engine will continue to be the

dominant powertrain configuration even through 2030 such vehicles will be equipped with advanced technologies materials electronics and controls and aerodynamics And by 2030 the deployment of alternative methods to propel and fuel vehicles and alternative modes of transportation including autonomous vehicles will be well underway What are these new technologies how will they work and will some technologies be more effective than others Written to inform The United States Department of Transportation s National Highway Traffic Safety Administration NHTSA and Environmental Protection Agency EPA Corporate Average Fuel Economy CAFE and greenhouse gas GHG emission standards this new report from the National Research Council is a technical evaluation of costs benefits and implementation issues of fuel reduction technologies for next generation light duty vehicles Cost Effectiveness and Deployment of Fuel Economy Technologies for Light Duty Vehicles estimates the cost potential efficiency improvements and barriers to commercial deployment of technologies that might be employed from 2020 to 2030 This report describes these promising technologies and makes recommendations for their inclusion on the list of technologies applicable for the 2017 2025 CAFE standards
