 NOVEMBER EXAMINATION PAPER 2**

QUESTION 1

1.1 Draw a rhombus and indicate all properties in mathematical language. (5)

1.2 Choose the correct answer and write only the LETTER on your answer sheet.

1.2.1 Which of the following statements is NOT true about a kite?

- A. The longer diagonal bisects the shorter diagonal at 90°
- B. The shorter diagonal bisects the longer diagonal at 90°
- C. Diagonals bisect each other
- D. Diagonals are equal

1.2.2 An isosceles triangle has a top angle of 70° . The individual value of the equal angles will be:

- A. 60°
- B. 55°
- C. 70°
- D. 65°

1.2.3 A translation is:

- A. Any horizontal or vertical change in position of a shape.
- B. A mirror image of the original position.
- C. An enlargement of the original shape.
- D. A reduction of the original shape.

1.2.4 What is the length of AC in the figure below:

- A. 16cm
- B. 15cm
- C. 13cm
- D. 5cm

1.2.5 A point on a shape has coordinates $(-2; 3)$, what would the new coordinates be after a $y' = -x$ reflection

- A. $(3; -2)$
- B. $(2; 3)$
- C. $(-3; 2)$
- D. $(3; 2)$

with limited English abilities A Virginia Tech music instructor who is leading a group of high school aged boys through the creation of an original opera staged totally in the online game Minecraft Experts argue that games do truly believe in you They focus inspire and reassure people in ways that many teachers can't Games give people a chance to learn at their own pace take risks cultivate deeper understanding fail and want to try again right away and ultimately succeed in ways that too often elude them in school This book is sure to excite and inspire educators and parents as well as provoke some passionate debate *Teaching and Learning Secondary School Mathematics* Ann Kajander, Jennifer Holm, Egan J Chernoff, 2018-10-24

This volume brings together recent research and commentary in secondary school mathematics from a breadth of contemporary Canadian and International researchers and educators It is both representative of mathematics education generally as well as unique to the particular geography and culture of Canada The chapters address topics of broad applicability such as technology in learning mathematics recent interest in social justice contexts in the learning of mathematics as well as Indigenous education The voices of classroom practitioners the group ultimately responsible for implementing this new vision of mathematics teaching and learning are not forgotten Each section includes a chapter written by a classroom teacher making this volume unique in its approach We have much to learn from one another and this volume takes the stance that the development of a united vision supported by both research and professional dialog provides the first step **Numerical Development - From cognitive functions to neural underpinnings** Korbinian Moeller, Elise

Klein, Klaus F Willmes - von Hinckeldey, Karin Kucian, 2015-02-24 Living at the beginning of the 21st century requires being numerate because numerical abilities are not only essential for life prospects of individuals but also for economic interests of post industrial knowledge societies Thus numerical development is at the core of both individual as well as societal interests There is the notion that we are already born with a very basic ability to deal with small numerosities Yet this often called number sense seems to be very restricted approximate and driven by perceptual constraints During our numerical development in formal e.g. school but also informal contexts e.g. family street we acquire culturally developed abstract symbol systems to represent exact numerosities in particular number words and Arabic digits refining our numerical capabilities In recent years numerical development has gained increasing research interest documented in a growing number of behavioural neuro scientific educational cross cultural and neuropsychological studies addressing this issue Additionally our understanding of how numerical competencies develop has also benefitted considerably from the advent of different neuro imaging techniques allowing for an evaluation of developmental changes in the human brain In sum we are now starting to put together a more and more coherent picture of how numerical competencies develop and how this development is associated with neural changes as well In the end this knowledge might also lead to a better understanding of the reasons for atypical numerical development which often has grievous consequences for those who suffer from developmental dyscalculia or mathematics learning disabilities Therefore this Research Topic deals with all aspects of numerical development findings

from behavioural performance to underlying neural substrates from cross sectional to longitudinal evaluations from healthy to clinical populations To this end we included empirical contributions using different experimental methodologies but also theoretical contributions review articles or opinion papers

Elliptic-Hyperbolic Partial Differential Equations Thomas H. Otway, 2015-07-08 This text is a concise introduction to the partial differential equations which change from elliptic to hyperbolic type across a smooth hypersurface of their domain These are becoming increasingly important in diverse sub fields of both applied mathematics and engineering for example The heating of fusion plasmas by electromagnetic waves The behaviour of light near a caustic Extremal surfaces in the space of special relativity The formation of rapids transonic and multiphase fluid flow The dynamics of certain models for elastic structures The shape of industrial surfaces such as windshields and airfoils Pathologies of traffic flow Harmonic fields in extended projective space They also arise in models for the early universe for cosmic acceleration and for possible violation of causality in the interiors of certain compact stars Within the past 25 years they have become central to the isometric embedding of Riemannian manifolds and the prescription of Gauss curvature for surfaces topics in pure mathematics which themselves have important applications Elliptic Hyperbolic Partial Differential Equations is derived from a mini course given at the ICMS Workshop on Differential Geometry and Continuum Mechanics held in Edinburgh Scotland in June 2013 The focus on geometry in that meeting is reflected in these notes along with the focus on quasilinear equations In the spirit of the ICMS workshop this course is addressed both to applied mathematicians and to mathematically oriented engineers The emphasis is on very recent applications and methods the majority of which have not previously appeared in book form
