Study of the human organism and its internal body

Anatomy

The study of the structure of the human body and its internal organs

Physiology

The study of the function of the human body and its internal organs

Structural levels

Studying the human body at the cellular, tissue, organ, and system levels

- 1. **Cellular level** - study of the structure and function of cells
- 2. **Tissue level** - study of the structure and function of tissues
- 3. **Organ level** - study of the structure and function of organs
- 4. **System level** - study of the structure and function of systems
- 5. **Whole body level** - study of the structure and function of the whole body

CELLS AND TISSUES

Cells are the basic units of structure and function of the human body

Characteristics of cells

All cells are eukaryotic and have a nucleus

Cells are specialized for their function

Cells are surrounded by a cell membrane

Cells are connected to each other

Cells are constantly changing

The **epithelium** is the outermost layer of cells that covers the body

Epithelial cells are specialized for their function

Epithelial cells are connected to each other

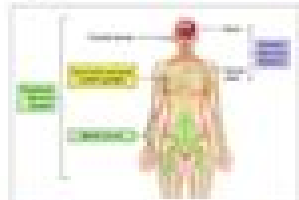

Epithelial cells are constantly changing

Epithelial cells are surrounded by a basement membrane

NERVOUS SYSTEM

Functions

- 1. **Control** - the nervous system controls the body's functions
- 2. **Integration** - the nervous system integrates information from the body and the environment
- 3. **Communication** - the nervous system communicates with other parts of the body
- 4. **Response** - the nervous system responds to stimuli

Structure

The nervous system is composed of the brain and the spinal cord

The brain is the control center of the nervous system

The spinal cord is the communication pathway between the brain and the rest of the body

Nerves are bundles of axons that carry signals between the brain and the rest of the body

Neurons are the basic units of the nervous system

IMMUNE SYSTEM

The immune system is the body's defense system

Types of immunity

1. **Innate immunity** - the body's first line of defense

2. **Adaptive immunity** - the body's second line of defense

3. **Passive immunity** - immunity acquired from another person

4. **Active immunity** - immunity acquired from exposure to an antigen

5. **Artificial immunity** - immunity acquired from a vaccine

6. **Natural immunity** - immunity acquired from exposure to an antigen

7. **Humoral immunity** - immunity mediated by antibodies

8. **Cell-mediated immunity** - immunity mediated by T cells

9. **Systemic immunity** - immunity that affects the whole body

10. **Local immunity** - immunity that affects a specific area

11. **Primary immunity** - the first response to an antigen

12. **Secondary immunity** - the second response to an antigen

13. **Tertiary immunity** - the third response to an antigen

14. **Quaternary immunity** - the fourth response to an antigen

15. **Quinary immunity** - the fifth response to an antigen

ORGAN SYSTEMS OF THE BODY

The body is composed of several organ systems that work together to maintain life

The **digestive system** is responsible for breaking down food into nutrients

The **respiratory system** is responsible for exchanging gases with the environment

The **circulatory system** is responsible for transporting blood throughout the body

The **excretory system** is responsible for removing waste from the body

The **reproductive system** is responsible for producing offspring

The **immune system** is responsible for defending the body against pathogens

The **endocrine system** is responsible for regulating the body's functions

The **musculoskeletal system** is responsible for supporting the body and enabling movement

The **integumentary system** is responsible for protecting the body from the environment

The **sensory system** is responsible for receiving information from the environment

The **motor system** is responsible for responding to information from the environment

The **homeostatic system** is responsible for maintaining the body's internal environment

The **reproductive system** is responsible for producing offspring

The **immune system** is responsible for defending the body against pathogens

The **endocrine system** is responsible for regulating the body's functions

The **musculoskeletal system** is responsible for supporting the body and enabling movement

The **integumentary system** is responsible for protecting the body from the environment

The **sensory system** is responsible for receiving information from the environment

The **motor system** is responsible for responding to information from the environment

The **homeostatic system** is responsible for maintaining the body's internal environment

The **reproductive system** is responsible for producing offspring

ENDOCRINE SYSTEM

- 1. **Control** - the endocrine system controls the body's functions
- 2. **Integration** - the endocrine system integrates information from the body and the environment
- 3. **Communication** - the endocrine system communicates with other parts of the body
- 4. **Response** - the endocrine system responds to stimuli

Structure and function

The endocrine system is composed of the following glands:

1. **Hypothalamus** - the control center of the endocrine system

2. **Pituitary gland** - the master gland of the endocrine system

3. **Thyroid gland** - the gland that controls metabolism

4. **Parathyroid gland** - the gland that controls calcium levels

5. **Adrenal gland** - the gland that controls stress response

6. **Pancreas** - the gland that controls blood sugar levels

7. **Ovaries** - the glands that control female reproductive functions

8. **Testes** - the glands that control male reproductive functions

9. **Thymus gland** - the gland that controls immune system

10. **Anterior pituitary gland** - the gland that controls growth and development

11. **Posterior pituitary gland** - the gland that controls water balance

12. **Intermediate pituitary gland** - the gland that controls milk production
