Encompassing historical accounts of both geography and geology, the book explores the origin, development, and prosperity of ancient Chinese geoscience. It introduces a wide range of topics covering a time span from the primitive societies to the Late Qing dynasty. In each time period, as well as discussion of the contexts, topics include the mainstream schools of thought, scientific discoveries, and their significance. Scholarly works, well-known experts, major research activities, research institutes, educational programmes, academic journals, scientific instruments, and knowledge exchange. The book also deals with the history of several neighbouring disciplines such as climatology, cartology, hydrology, geomorphology, and mineral petrology. The authors provide an exceptionally detailed description of geoscience in embryo, the forming of early knowledge of the Earth in primitive society. For the first time, philosophers' geoscientific understanding of the world and the findings of historical mineralogy and petrology are brought to the fore.
