State, Foreign Operations, and Related Programs Appropriations for 2010, Part 4, March 25, 2009, 111-1 Hearings, 2010 *The long and short of mental time travel-- self-projection over time-scales large and small* James M. Broadway, Claire M. Zedelius, Jonathan W. Schooler, Simon Grondin, 2015-07-02 Researchers working in many fields of psychology and neuroscience are interested in the temporal structure of experience as well as the experience of time at scales of a few milliseconds up to a few seconds as well as days months years and beyond This Research Topic supposes that broadly speaking the field of time psychology can be organized by distinguishing between perceptual and conceptual time scales Dealing with conceptual time mental time travel also called mental simulation self projection episodic semantic memory propection foresight allows humans and perhaps other animals to imagine and plan events and experiences in their personal futures based in large part on memories of their personal pasts as well as general knowledge Moreover contents of human language and thought are fundamentally organized by a temporal dimension enmeshed with it so thoroughly that it is usually expressible only through spatial metaphors But what might such notions have to do with experienced durations of events lasting milliseconds up to a few seconds during the so called present moment of perception action cycle time This Research Topic is organized around the general premise that by considering how mental time travel might scale down to time perception and vice versa no less progress and integrative synthesis within and across scientific domains might be facilitated Bipolar configurations of future and past orientations of the self may be repeated in parallel across conceptual and perceptual time scales subsumed by a general Janus like feedforward feedback system for goal pursuit As an example it is notable that the duality of propection and semantic episodic memory operating at conceptual time scales has an analogue in perception action cycle time namely the interplay of anticipatory attention and working memory Authors from all areas of psychology and neuroscience are encouraged to submit articles of any format accepted by the journal Original Research Methods Hypothesis Theory Reviews etc which might speak to questions about time and temporal phenomena at long and or short time scales

The Evolution of Primate Societies John C. Mitani, Josep Call, Peter M. Kappeler, Ryne A. Palombit, Joan B. Silk, 2012-10-24 In 1987 the University of Chicago Press published Primate Societies the standard reference in the field of primate behavior for an entire generation of students and scientists But in the twenty five years since its publication new theories and research techniques for studying the Primate order have been developed debated and tested forcing scientists to revise their understanding of our closest living relatives Intended as a sequel to Primate Societies The Evolution of Primate Societies compiles thirty one chapters that review the current state of knowledge regarding the behavior of nonhuman primates Chapters are written by the leading authorities in the field and organized around four major adaptive problems primates face as they strive to grow maintain themselves and reproduce in the wild The inclusion of chapters on the behavior of humans at the end of each major section represents one particularly novel aspect of the book and

it will remind readers what we can learn about ourselves through research on nonhuman primates The final section highlights some of the innovative and cutting edge research designed to reveal the similarities and differences between nonhuman and human primate cognition The Evolution of Primate Societies will be every bit the landmark publication its predecessor has been *The Oxford Handbook of Comparative Evolutionary Psychology* Jennifer Vonk, Todd K.

The Quest for Symbolic Communication in Non-Human Animals Ulrike Griebel, D. Kimbrough Oller, Irene M. Pepperberg, 2024-06-13 Human language is unique among animals We assume that complex cognitive capacities in general and language in particular evolved gradually and thus are manifest in different kinds and or degrees in other animals demonstrating social communication This assumption is supported by the fact that we can train social species from very different groups of animals e g great apes dolphins dogs parrots to understand and in several cases even use abstract symbols for communication with humans and conspecifics Even simple grammatical rules for sequences of 2 3 symbols can be trained to be understood by several species e g great apes dogs dolphins Even though human language training in these species takes considerable time and effort it convinces us that cognitive foundations for language are present in other species and given the relevant selection pressures symbolic communication could evolve in other species

Chimpanzees, War, and History R. Brian Ferguson, 2023 The question of whether men are predisposed to war runs hot in contemporary scholarship and online discussion Within this debate chimpanzee behavior is often cited to explain humans propensity for violence the claim is that male chimpanzees kill outsiders because they are evolutionarily inclined suggesting to some that people are too The

longstanding critique that killing is instead due to human disturbance has been pronounced dead and buried In Chimpanzees War and History R Brian Ferguson challenges this consensus Bringing readers on a journey through theoretical struggle and clashing ideas about chimpanzees bonobos and evolution Ferguson opens new ground on the age old question are men born to kill *Linguistics and Language Behavior Abstracts* ,2008 *Neuroeconomics* Paul E. Phillips,Jeansok J. Kim,Daeyeol Lee, The brain is the organ of decision making and evolved to maximize the outcomes desirable for the survival and reproduction of the species Compared to the sensory and motor functions of the brain however the process of decision making is less accessible to direct experimental manipulations and hence requires more careful theoretical analyses Indeed the principle of optimality and frequent departures of human behaviors from those predicted for optimal rational decision makers have long been studied experimentally as well as theoretically However it is only recently that neurobiological studies of decision making started exploiting the framework previously developed in economics and psychology systematically This cross disciplinary research program known as neuroeconomics has already been enormously successful Increasingly neuroscientists benefit from the studies of utility theory game theory prospect theory and reinforcement learning theory and contribute to the refinement of such theories by providing more relevant empirical data This Research Topic will showcase the recent advances in neuroeconomics that combine economic and behavioral analyses in neurobiological studies of value based decision making

Sugar and Spice, and Everything Nice: Exploring Prosocial Development Through Infancy and Early Childhood Chris Moore, Markus Paulus,Amanda Williams,2015-05-18 Prosocial behaviors such as sharing helping and comforting begin to emerge early in development The presence of these prosocial behaviors is important not only in childhood but throughout one s lifetime as behaving prosocially is important for social functioning and maintaining social relationships For many years researchers have been interested in how and when these behaviors develop as well as how these behaviors are influenced by a variety of factors Recently however exciting new research has shown novel and surprising findings particularly on the early development and ontogenetic origins of prosocial behavior Research in this area is important as by understanding what influences prosocial behavior we may be better able to sustain and support the development of prosociality Further a richer understanding may help us to be better able to mediate factors that impede or negatively influence positive social behaviors as well as negate triggers that may lead to negative social behaviors Many theoretical views guide different streams of developmental research in this field Here we will bring together scholars from various theoretical backgrounds to collectively explore the development of early prosocial behaviors from early infancy to early school aged children Contributors will offer insights using a variety of methodologies from various resource allocation paradigms derived from economist game theorists to looking time paradigms and more Together we seek to broadly explore questions pertaining to prosocial development for example at what age do prosocial behaviors moral understanding or social selectivity emerge Contributors will individually address unique research questions across a

spectrum of topics For example how prosocial behaviors are influenced by underlying mechanisms such as moral emotions e g guilt and sympathy will be explored as will how children s expectations may shape their behaviors and how they come to care about others Questions surrounding different contexts will also be investigated For example how does empathy influence prosociality Do children treat partners differently depending on their past behaviors wealth or other characteristics Does whether there is a cost associated with behaving prosocially influence decision making By incorporating the work of numerous researchers in the field of prosocial development who contribute comprehensive reviews of past research unique theoretical perspectives and empirical approaches the proposed research topic endeavors to provide new insights into a breadth of prosocial behaviors In sum the proposed research topic will contribute to our understanding of prosocial development in the early years by highlighting the relevant factors and contexts under which prosocial behavior emerges
