1. The first step in solving a system of linear equations is to write the equations in slope-intercept form. This means that the equations should be written in the form $y = mx + b$, where m is the slope and b is the y-intercept. Once the equations are in slope-intercept form, you can use the substitution method to solve the system. This involves substituting the expression for y from one equation into the other equation, and then solving for x . Once you have found the value of x , you can substitute it back into one of the original equations to find the value of y .

2. The second step in solving a system of linear equations is to write the equations in slope-intercept form.
