Wooldridge, 2010-10-01 The second edition of a comprehensive state of the art graduate level text on microeconomic methods substantially revised and updated The second edition of this acclaimed graduate text provides a unified treatment of two methods used in contemporary econometric research cross section and data panel methods By focusing on assumptions that can be given behavioral content the book maintains an appropriate level of rigor while emphasizing intuitive thinking The analysis covers both linear and nonlinear models including models with dynamics and or individual heterogeneity In addition to general estimation frameworks particular methods of moments and maximum likelihood specific linear and nonlinear methods are covered in detail including probit and logit models and their multivariate Tobit models models for count data censored and missing data schemes causal or treatment effects and duration analysis *Econometric Analysis of Cross Section and Panel Data* was the first graduate econometrics text to focus on microeconomic data structures allowing assumptions to be separated into population and sampling assumptions This second edition has been substantially updated and revised Improvements include a broader class of models for missing data problems more detailed treatment of cluster problems an important topic for empirical researchers expanded discussion of generalized instrumental variables GIV estimation new coverage based on the

author's own recent research of inverse probability weighting a more complete framework for estimating treatment effects with panel data and a firmly established link between econometric approaches to nonlinear panel data and the generalized estimating equation literature popular in statistics and other fields New attention is given to explaining when particular econometric methods can be applied the goal is not only to tell readers what does work but why certain obvious procedures do not The numerous included exercises both theoretical and computer based allow the reader to extend methods covered in the text and discover new insights

Multivariate Generalized Linear Mixed Models Using R Damon Mark Berridge,Robert Crouchley,2011-04-25

Multivariate Generalized Linear Mixed Models Using R presents robust and methodologically sound models for analyzing large and complex data sets enabling readers to answer increasingly complex research questions The book applies the principles of modeling to longitudinal data from panel and related studies via the Sabre software package in R A Unified Framework for a Broad Class of Models The authors first discuss members of the family of generalized linear models gradually adding complexity to the modeling framework by incorporating random effects After reviewing the generalized linear model notation they illustrate a range of random effects models including three level multivariate endpoint event history and state dependence models They estimate the multivariate generalized linear mixed models MGLMMs using either standard or adaptive Gaussian quadrature The authors also compare two level fixed and random effects linear models The appendices contain additional information on quadrature model estimation and endogenous variables along with SabreR

commands and examples Improve Your Longitudinal Study In medical and social science research MGLMMs help disentangle state dependence from incidental parameters Focusing on these sophisticated data analysis techniques this book explains the statistical theory and modeling involved in longitudinal studies Many examples throughout the text illustrate the analysis of real world data sets Exercises solutions and other material are available on a supporting website *Time Series and Panel Data Econometrics* M. History and Economic Life Georg Christ,Philipp R. Rössner,2020-02-27 History and Economic Life offers students a wide ranging introduction to both quantitative and qualitative approaches to interpreting economic history sources from the Middle Ages to the Twentieth Century Having identified an ever widening gap between the use of qualitative sources by cultural historians and quantitative sources by economic historians the book aims to bridge the divide by making economic history sources more accessible to students and the wider public and highlighting the need for a complementary rather than exclusive approach Divided into two parts the book begins by equipping students with a toolbox to approach economic history sources considering the range of sources that might be of use and introducing different ways of approaching them The second part consists of case studies that examine how economic historians use such sources helping readers to gain a sense of context and understanding of how these sources can be used The book thereby sheds light on important debates both within and beyond the field and highlights the benefits gained when combining qualitative and quantitative approaches to source analysis Introducing sources often avoided in culturally minded history or statistically minded economic history courses respectively and advocating a combined quantitative and qualitative approach it is an essential resource for students undertaking source analysis within the field
