Handbook of Water and Wastewater Systems Protection Robert M. Clark, Simon Hakim, Avi Ostfeld, 2011-09-01

Following the events of 9 11 the Administrator of the US Environmental Protection Agency created the Water Protection Task Force WPTF which identified water and wastewater systems as a major area of vulnerability to deliberate attack The WPTF suggested that there are steps that can be taken to reduce these vulnerabilities and to make it as difficult as possible for potential saboteurs to succeed The WPTF recommended that be scrutinized with renewed vigor to secure water and wastewater systems against these possible threats It also recommended that water and wastewater systems have a response plan in place in the event an act of terrorism occurs The WPTF identified water distribution networks as an area of special vulnerability and highlighted the need for rapid on line detection methods that are accurate and have a wide detection range As a result of these recommendations novel technologies from various fields of science and engineering are now addressing water security issues and water and wastewater utilities are looking for innovative solutions Once such technologies are available there will be a rapid implementation process that will present many business opportunities for the private sector However in addition to terrorist threats water and wastewater systems are inherently vulnerable to natural disasters such as earthquakes and floods This volume will address the problems associated with both intended terrorist attacks and natural disasters affecting water or wastewater systems The book is divided into parts based on the kinds of threats facing water and wastewater systems 1 a direct attack on water and wastewater infrastructure storage reservoirs and distribution and collection networks 2 a cyber attack disabling the functionality of the water and wastewater systems or taking over control of key components which might result in system failures and 3 a deliberate chemical or biological contaminant injection at one of the water distribution system s nodes It will examine unique plans technological and managerial innovations for protecting such systems and includes descriptions of projects that were implemented to respond to natural disasters Case studies are presented that discuss existing projects and evaluate their performance with an emphasis on providing guidelines and techniques that can be implemented by water and wastewater planners and managers to deal with natural and manmade disasters should they occur

Castlevania Series , Alberta Oil Sands , 2012-11-07

At 170 billion barrels Canada s Oil Sands are the third largest reserves of developable oil in the world The Oil Sands now produce about 1 6 million barrels per day with production expected to double by 2025 to about 3 7 million barrels per day The Athabasca Oil Sands Region AOSR in northeastern Alberta is the largest of the three oil sands deposits Bitumen in the oil sands is recovered through one of two primary methods mining and drilling About 20 per cent of the reserves are close to the

surface and can be mined using large shovels and trucks Of concern are the effects of the industrial development on the environment Both human made and natural sources emit oxides of sulphur and nitrogen trace elements and persistent organic compounds Of additional concern are ground level ozone and greenhouse gases Because of the requirement on operators to comply with the air quality regulatory policies and to address public concerns the not for profit multi stakeholder Wood Buffalo Environmental Association WBEA has since 1997 been closely monitoring air quality in AOSR In 2008 WBEA assembled a distinguished group of international scientists who have been conducting measurements and practical research on various aspects of air emissions and their potential effects on terrestrial receptors This book is a synthesis of the concepts and results of those on going studies It contains 19 chapters ranging from a global perspective of energy production measurement methodologies and behavior of various air pollutants during fossil fuel production in a boreal forest ecosystem towards designing and deploying a multi disciplinary proactive and long term environmental monitoring system that will also meet regulatory expectations Covers measurement of emissions from very large industrial sources in a region with huge international media profile Validation of measurement technologies can be applied globally The new approaches to ecological monitoring described can be applied in other forested regions *Deicing Planning Guidelines and Practices for Stormwater Management Systems* ,2009 At head of title Airport Cooperative Research Program

Microbial Symbiosis of Marine Sessile Hosts - Diversity, Function and Applications Suhelen Egan, Torsten Thomas,2015-12-21 Modern molecular omics tools metagenomics metaproteomics etc have greatly contributed to the rapid advancement of our understanding of microbial diversity and function in the world s oceans These tools are now increasingly applied to host associated environments to describe the symbiotic microbiome and obtain a holistic view of marine host microbial interactions Whilst all eukaryotic hosts are likely to benefit from their microbial associates marine sessile eukaryotes including macroalgae seagrasses and various invertebrates sponges acidians corals hydroids etc rely in particular on the function of their microbiome For example marine sessile eukaryotes are under constant grazing colonization and fouling pressure from the millions of micro and macroorganisms in the surrounding seawater Host associated microorganisms have been shown to produce secondary metabolites as defense molecules against unwanted colonization or pathogens thus having an important function in host health and survival Similarly microbial symbionts of sessile eukaryotes are often essential players in local nutrient cycling thus benefiting both the host and the surrounding ecosystem Various research fields have contributed to generating knowledge of host associated systems including microbiology biotechnology molecular biology ecology evolution and biotechnology Through a focus on model marine sessile host systems we believe that new insight into the interactions between host and microbial symbionts will be obtained and important areas of future research will be identified This research topic includes original research review and opinion articles that bring together the knowledge from different aspects of biology and highlight advances in our understanding of the diversity and function of the microbiomes on marine sessile hosts
