Abstract. *Staphylococcus aureus* is a leading cause of nosocomial infection. The purpose of this study was to determine the prevalence of *S. aureus* in the nasal cavity of healthy carriers in a tertiary care hospital. A total of 100 patients were screened for *S. aureus* colonization. The results showed that 45% of the patients were colonized with *S. aureus*. The colonization was found to be significantly higher in patients who had been in the hospital for more than 48 hours. The results of this study suggest that *S. aureus* colonization is a common occurrence in healthy carriers in a tertiary care hospital.
