Discovering Science Through Inquiry: Matter Kit Rachel E. Green, 2010-05-12 The Discovering Science through Inquiry series provides teachers and students of grades 3-8 with direction for hands-on science exploration around particular science topics and focuses. The series follows the 5E model: engage, explore, explain, elaborate, evaluate. The Matter kit provides a complete inquiry model for the exploration of the structure and properties of matter through supported investigation. Encourage students through activities such as studying the chemical properties of matter and investigating whether household items are acids and bases. Matter kit includes 16 Inquiry Cards in print and digital formats, Teacher's Guide, Inquiry Handbook. Each kit includes a single copy; additional copies can be ordered. Digital resources include PDFs of activities and additional teacher resources including images and assessment tools, leveled background pages for students, and video clips to support both students and teachers. *Activities for a Differentiated Classroom: Level 4* Wendy

Why Does Inequality Matter? T. M. Scanlon, 2017-12-29 Inequality is widely regarded as morally objectionable T M Scanlon investigates why it matters to us Demands for greater equality can seem puzzling because it can be unclear what reason people have for objecting to the difference between what they have and what others have as opposed simply to wanting to be better off This book examines six such reasons Inequality can be objectionable because it arises from a failure of some agent to give equal concern to the interests of different parties to whom it is obligated to provide some good It can be objectionable because it involves or gives rise to objectionable inequalities in status It can be objectionable because it gives the rich unacceptable forms of control over the lives of those who have less It can be objectionable because it interferes with the procedural fairness of economic institutions or because it deprives some people of substantive opportunity to take part in those institutions Inequality can be objectionable because it interferes with the fairness of political institutions Finally inequality in wealth and income can be objectionable because it is unfair the institutional mechanisms that produce it cannot be justified in the relevant way Scanlon's aim is to provide a moral anatomy of these six reasons and the ideas of equality that they involve He also examines objections to the pursuit of equality on the ground that it involves objectionable interference with individual liberty and argues that ideas of desert do not provide a basis either for justifying significant economic inequality or for objecting to it

Why Society is a Complex Matter Philip Ball, 2012-06-09 Society is complicated But this book argues that this does not place it beyond the reach of a science that can help to explain and perhaps even to predict social behaviour As a system made up of many interacting agents people groups institutions and governments as well as physical and technological structures such as roads and computer networks society can be regarded as a complex system In recent years scientists have made great progress in understanding how such complex systems operate ranging from animal populations to earthquakes and weather These systems show behaviours that cannot be predicted or intuited by focusing on the individual components but which emerge spontaneously as a consequence of their interactions they are said to be self organized Attempts to direct or manage such emergent properties generally reveal that top down approaches which try to dictate a particular outcome are ineffectual and that what is needed instead is a bottom up approach that aims to guide self organization towards desirable states This book shows how some of these ideas from the

science of complexity can be applied to the study and management of social phenomena including traffic flow economic markets opinion formation and the growth and structure of cities Building on these successes the book argues that the complex systems view of the social sciences has now matured sufficiently for it to be possible desirable and perhaps essential to attempt a grander objective to integrate these efforts into a unified scheme for studying understanding and ultimately predicting what happens in the world we have made Such a scheme would require the mobilization and collaboration of many different research communities and would allow society and its interactions with the physical environment to be explored through realistic models and large scale data collection and analysis It should enable us to find new and effective solutions to major global problems such as conflict disease financial instability environmental despoliation and poverty while avoiding unintended policy consequences It could give us the foresight to anticipate and ameliorate crises and to begin tackling some of the most intractable problems of the twenty first century
