mathematics is how it is done and how mathematicians think The second edition of this unique flexible approach builds on the success of the first edition The authors offer an emphasis on active learning helping students learn algebra by gradually building both their intuition and their ability to write coherent proofs in context The goals for this text include Allowing the flexibility to begin the course with either groups or rings Introducing the ideas behind definitions and theorems to help students develop intuition Helping students understand how mathematics is done Students will experiment through examples make conjectures and then refine or prove their conjectures Assisting students in developing their abilities to effectively communicate mathematical ideas Actively involving students in realizing each of these goals through in class and out of class activities common in class intellectual experiences and challenging problem sets Changes in the Second Edition Streamlining of introductory material with a quicker transition to the material on rings and groups New investigations on extensions of fields and Galois theory New exercises added and some sections reworked for clarity More online Special Topics investigations and additional Appendices including new appendices on other methods of proof and complex roots of unity Encouraging students to do mathematics and be more than passive learners this text shows students the way mathematics is developed is often different than how it is presented definitions theorems and proofs do not simply appear fully formed mathematical ideas are highly interconnected and in abstract algebra there is a considerable amount of intuition to be found
