Analysis & Optimization of Floor Planning Algorithms for VLSI Physical Design Dr. Ashad Ullah

Qureshi,2022-07-01 As prevailing copper interconnect technology advances to its fundamental physical limit interconnect delay due to ever increasing wire resistivity has greatly limited the circuit miniaturization Carbon nanotube CNT interconnects have emerged as promising replacement materials for copper interconnects due to their superior conductivity Buffer insertion for CNT interconnects is capable of improving circuit timing of signal nets with limited buffer deployment However due to the imperfection of fabricating long straight CNT there exist significant unidimensional spatially correlated variations on the critical CNT geometric parameters such as the diameter and density which will act the circuit performance This dissertation develops a novel timing driven buffer insertion technique considering unidimensional correlations of variations of CNT Although the fabrication variations of CNTs are not desired for the circuit designs targeting performance optimization and reliability these inherent imperfections make them natural candidates for building highly secure physical unclonable function PUF which is an advanced hardware security technology A novel CNT PUF design through leveraging Lorenz chaotic system is developed and we show that it is resistant to many machine learning modeling attacks In summary the studies in this dissertation demonstrate that CNT technology is highly promising for performance and security

optimizations in advanced VLSI circuit design **Handbook of Algorithms for Physical Design Automation** Charles J. Alpert,Dinesh P. Mehta,Sachin S. Sapatnekar,2008-11-12 The physical design flow of any project depends upon the size of the design the technology the number of designers the clock frequency and the time to do the design As technology advances and design styles change physical design flows are constantly reinvented as traditional phases are removed and new ones are added to accommodate changes in technology Handbook of Algorithms for Physical Design Automation provides a detailed overview of VLSI physical design automation emphasizing state of the art techniques trends and improvements that have emerged during the previous decade After a brief introduction to the modern physical design problem basic algorithmic techniques and partitioning the book discusses significant advances in floorplanning representations and describes recent formulations of the floorplanning problem The text also addresses issues of placement net layout and optimization routing multiple signal nets manufacturability physical synthesis special nets and designing for specialized technologies It includes a personal perspective from Ralph Otten as he looks back on the major technical milestones in the history of physical design automation Although several books on this topic are currently available most are either too broad or out of date Alternatively proceedings and journal articles are valuable resources for researchers in this area but the material is widely dispersed in the literature This handbook pulls together a broad variety of perspectives on the most challenging problems in the field and focuses on emerging problems and research results Proceedings of the First International Scientific Conference "Intelligent Information Technologies for Industry" (IITI'16) Ajith Abraham,Sergey Kovalev,Valery Tarassov,Václav

Knowledge Intensive Computer Aided Design Susan Finger,Tetsuo Tomiyama,Martti Mäntylä,2013-03-09 Computer Aided Design CAD technology plays a key role in today s advanced manufacturing environment To reduce the time to market achieve zero defect quality the at first production and use available production and logistics resources effectively product and design process knowledge covering the whole product life cycle must be used throughout product design Once generated this intensive design knowledge should be made available to later life cycle activities Due to the increasing concern about global environmental issues and rapidly changing economical situation worldwide design must exhibit high performance not only in quality and productivity but also in life cycle issues including extended producer s liability This requires designers and engineers to use various kinds of design knowledge intensively during product design and to generate design information for use in later stages of the product life cycle such as production distribution operation maintenance reclamation and recycling Therefore future CAD systems must incorporate product and design process knowledge which is not explicitly dealt with in the current systems in their design tools and design object models
