This book offers up to date and comprehensive coverage of the diagnosis and therapy of adenocarcinoma of the esophagogastric junction EGJ As is appropriate in the era of multidisciplinary and multimodal treatment the contributions of all the various specialists involved cooperatively in the treatment of EGJ cancer are thoroughly described Detailed attention is also paid to the significance of preneoplastic lesions such as Barrett esophagus The final part of the book represents a surgical atlas documenting the techniques used in the EGJ region with superb color images and stepwise description of procedures Against the background of the rapidly increasing incidence in EGJ cancer especially evident in Western countries there is a need for greater uniformity in management strategies which currently vary significantly across the world This book provides appropriate guidance that will assist all practitioners involved in the diagnosis and treatment of EGJ cancers including surgeons oncologists and radiotherapists

Treatment of Esophageal and Hypopharyngeal Squamous Cell Carcinoma Giovanni De Manzoni, 2011-12-09 Squamous cell carcinoma of the esophagus has a lower incidence than other gastrointestinal tract cancer however there are many difficult issues related to the choice of appropriate therapy for these patients In recent years the use of multimodal treatment has greatly improved the prognosis of patients affected by this disease but several aspects of the oncological and surgical management are still controversial This book aims to give a homogeneous approach to esophageal cancer treatment based on the author's lifetime experience in conjunction with exhaustive review of recent literature In each chapter surgeons and oncologists will find appropriate tools for correct management of the diagnosis and therapy of this difficult disease The book analyzes all the aspects of staging and treatment such as modern diagnostic and staging techniques MRI or PET CT endoscopic treatment of early cancer new minimally invasive and open surgical techniques and combined treatment In addition there are chapters dedicated to the postoperative course of these patients as well as their quality of life with indications for the correct follow up and treatment of relapses

Cancer of the Esophagus - ECAB Samiran Nundy, 2012-06-15 Of all the malignant lesions of the gastrointestinal tract cancer of the esophagus is among the most difficult to manage Although it has fairly typical presenting clinical features in the form of an elderly patient with dysphagia the subsequent investigations have to be fine tuned to select which patient should undergo esophageal resection a formidable procedure which carries a high mortality risk and is associated with serious complications who should undergo neoadjuvant therapy and who should only be palliated with stents or chemoradiotherapy In recent years this fine tuning has become much more precise with many patients being saved from harmful explorations of the chest and abdomen only to encounter widespread disease and at the same time many who have large locally invasive tumors which were thought to be unresectable being given neoadjuvant chemotherapy and subsequently being able sometimes to undergo curative esophagectomy Possibly because of these improvements in diagnosis and multimodality

treatment the 5 year survival of patients with esophageal cancer that has been resected has improved from a dismal 5% 15 years ago to a more respectable 25% now In this book authors two thirds of whom are from the Memorial Sloan Kettering Cancer Center MSKCC in New York have evaluated the published evidence on different aspects of the management of patients with esophageal cancer as well as made recommendations from their own experience with the disease Thus we have chapters on diagnostic and therapeutic endoscopy staging perioperative therapy operative treatment transhiatal radical Ivor Lewis and the minimally invasive approaches and postoperative complications Finally there is a chapter discussing the epidemiology and difficulties in the management of patients with esophageal cancer in India where the disease is common and mainly affects poor people who cannot afford expensive treatment The author mainly discusses the experience of the Tata Memorial Hospital in Mumbai where every year 1200 patients are seen with the disease and 180 undergo surgery This is amongst the largest experience of the treatment of patients with esophageal cancer worldwide All the subjects and authors have been brought together for this volume by the Editor Manjit Singh Bains who is a Professor of Clinical Cardiothoracic Surgery at the Cornell Weill Medical College in New York as well as an Attending Thoracic Surgeon at the MSKCC

Ferguson,2011-01-05 The second edition of *Difficult Decisions in Thoracic Surgery* An Evidence Based Approach addresses the growing complexity of decision making in thoracic surgery More than half of the clinical questions posed in this book are new and of the questions that remain as holdovers from the previous edition virtually all have been revised and updated As new technology is introduced physicians from nonsurgical specialties offer alternative and competing therapies for what was once the exclusive province of the thoracic surgeon In addition there is increasing knowledge regarding the efficacy of traditional thoracic surgical therapies How to select among these varied and complex approaches is becoming increasingly difficult Concise chapters are devoted to one or two specific questions or decisions in general thoracic surgery that are

difficult or controversial The authors identify relevant publications in their selected topics grade the quality of the evidence offered by those reports apply that knowledge to objective management recommendations in an idealized world and then comment on how they personally use the information in their own clinical practices The book is a valuable reference source for practicing surgeons surgeons in training and educators
