Bergmann,2023-10-19 This open access book examines how and why various forms of climate im mobilities can impact people s objective and subjective well being Worsening climate impacts are forcing subsistence farmers worldwide to decide between staying or leaving their homes This mixed methods study analyzes cases of climate related migration displacement relocation and immobility in Peru s coastal highland and rainforest regions The results reveal that numerous farmers experienced profound and often negative well being impacts regardless of whether they stayed or migrated The higher the structural constraints such as weak governance and the more damaging the climate impacts were the higher the risk of well being declines Additionally the affected individuals often had limited agency and ability to mitigate losses These findings challenge the notion of migration as adaptation and emphasize the importance of safeguarding the human rights and security of those affected while addressing loss and damage Without significant investments in such efforts climate impacts could sharply diminish the well being of numerous subsistence farmers worldwide irrespective of whether they stay or migrate

Developing Enterprise Chatbots Boris Galitsky,2019-04-04 A chatbot is expected to be capable of supporting a cohesive and coherent conversation and be knowledgeable which makes it one of the most complex intelligent systems being designed nowadays Designers have to learn to combine intuitive explainable language understanding and reasoning approaches with high performance statistical and deep learning technologies Today there are two popular paradigms for chatbot construction 1 Build a bot platform with universal NLP and ML capabilities so that a bot developer for a particular enterprise not being an expert can populate it with training data 2 Accumulate a huge set of training dialogue data feed it to a deep learning network and expect the trained chatbot to automatically learn how to chat Although these two approaches are reported to imitate some intelligent dialogues both of them are unsuitable for enterprise chatbots being unreliable and too brittle The latter approach is based on a belief that some learning miracle will happen and a chatbot will start functioning without a thorough feature and domain engineering by an expert and interpretable dialogue management algorithms Enterprise high performance chatbots with extensive domain knowledge require a mix of statistical inductive deep machine learning and learning from the web syntactic semantic and discourse NLP ontology based reasoning and a state machine to control a dialogue This book will provide a comprehensive source of algorithms and architectures for building chatbots for various domains based on the recent trends in computational linguistics and machine learning The foci of this book are applications of discourse analysis in text relevant assessment dialogue management and content generation which help to
