The nature nurture debate continues to stir controversy in the social and behavioral sciences How much of human behavior and development can be attributed to biology and how much to the environment Can either be said to determine human development And what are the implications of each view for society In this important study a noted developmental psychologist contributes to this debate by confronting the difficult issue of doctrines of human development and the consequences for society of deriving political programs and public policy from them Beginning with the premise that scientific ideas are not neutral but can be used for either good or evil Richard Lerner considers the recent history of one such idea biological determinism which at times has had the backing of respected scientists intellectuals and political leaders During this century biological determinism has been coupled with political philosophies that hold that some people are inherently better than others This has meant that certain groups of people Jews Blacks Native Americans women have been stigmatized because of supposedly innate even biological differences with sometimes disastrous consequences The most notorious instance was Nazi Germany where racial science given legitimacy by the scientific community became a cornerstone of the Nazi Final Solution Meanwhile theories of biological determinism continue to find adherents within the scientific community Konrad Lorenz who was awarded a Nobel Prize in 1973 was a critical figure in the development of the most recent manifestation of biological determinism sociobiology Lerner examines the work of Lorenz and current sociobiologists and the implications of their claims for modern society He fears that biological determinism may again be co opted to serve the political agenda of today s reactionary politicians In fact Lerner notes sociobiologists have had to face the fact that organizations such as the fascist National Front party in Britain and its counterparts in France and the United States have selectively seized upon sociobiology to fuel their notions of genetically superior and inferior races
