A Southern Fried Education Mark Hickson, III, 2006-03 A SOUTHERN FRIED EDUCATION traces the education of a Southern man from the first grade through both graduate school and law school The road is somewhat treacherous but in traveling it author Mark Hickson III envisions several principles that will help others avoid making the same mistakes he made mistakes involving the system of spankings in the 1950s science laboratory courses in high school and college thesis writing and arguing with law professors Some of the principles Hickson has learned include the following Never embarrass a teacher in class Never post grades near your office Teachers and students can be friends Don't tutor colleagues in graduate school A good teacher never destroys a student's dreams The most important thing to know is when to say nothing More important than the principles in each story is the way in which every small trail leads to a new discovery a new principle about school and life Whether it's teaching someone to be careful about promises or realizing that relationships are more valuable than the content of a course the short stories in A SOUTHERN FRIED EDUCATION display a wealth of wisdom about life culture and those things that can only be learned through time *while on other hand USA, EU survey like PEW Research, USA ++, they also have only 2000 or 3000 elite people data base, they all are scientific honest in political science, foreign affair, and in true picture prediction of* Ruhel Chisty FRACI CChem A, MRSC CChem A,

Million Dollar Data: Building Confidence - Vol.1 Stephen DeMeo, 2020-07-31 Global warming our current and greatest challenge is without precedent Among the many consequences that are impacting our society one unanticipated concern involves scientific truth When the President of the United States and others in his administration declare that global warming is fake science it calls into question what real science is and what real school science should be I will argue that real science is quality science one that is based on the rigorous collection of reliable and valid data To collect quality data requires bending over backwards to get

things right and this is exactly what makes science so special Truth is made when scientists go this extra yard and devise controlled experiments collect large data sets confirm the data and rationally analyze their results Making scientific truth sounds difficult to do in the science laboratory but in reality there are many straightforward ways that truth can be constructed In the first of two volumes I discuss twelve such ways I call them Confidence Indicators that can allow students to strongly believe in their data and their subsequent results Many of these methods are intuitive and can be used by young students on the late elementary level all the way up to those taking introductory college science courses As in life science is not without doubt In the second volume I introduce the concept of scientific uncertainty and the indicators used to calculate its magnitude I will show that science is about connecting confidence with uncertainty in a specific manner what I refer to as the Confidence Uncertainty Continuum expression This important relationship epitomizes the scientific enterprise as a search for probabilistic rather than absolute truth This two volume set will contain a variety of ways that data quality can be instituted into a science curriculum To support its use many of the examples that I will present involve science teachers as well as student work and feedback from different grade levels and in different scientific disciplines Specific chapters will be devoted to reviewing the academic literature on data quality as well as describing my own personal research on this important but often neglected topic
