CHAPTER 3 EXERCISES

For the exercises in this chapter, you will use the GSS dataset (file name: gss.dta).

1. (Dataset: GSS. Variables: polviews, wtss.) The GSS dataset contains polviews, which measures political ideology—the extent to which individuals “think of themselves as liberal or conservative.” Here is how polviews is coded (the labels are fully written out):

Numeric Code	Value Label
1	Extremely liberal
2	Liberal
3	Slightly liberal
4	Moderate
5	Slightly conservative
6	Conservative
7	Extremely conservative

- A. Apply the **Analyze ► Descriptive Statistics ► Frequencies** procedure to polviews, making sure to weight the data using the wtss variable. Eyeball the percent column and make some rough-and-ready estimates.

The percentage of respondents who are either “extremely liberal,” “liberal,” or “slightly liberal” is (circle one)

about 18 percent. about 28 percent.
 about 38 percent.

The percentage of respondents who are either “slightly conservative,” “conservative,” or “extremely conservative” is (circle one)

about 10 percent. about 20 percent.
 about 30 percent.

- B. Use polviews and the **Transform ► Recode into Different Variables** procedure to create a new variable named polview3. Give polview3 this label: “Ideology: 3 categories.” Collapse the three liberal codes into one category (coded 1 on polview3), put the moderates

into their own category (coded 2 on polview3), and collapse the three conservative codes into one category (coded 3 on polview3). Don’t forget to recode missing values on polviews into missing values on polview3. Run **Frequencies** on polview3.

The percentage of respondents who are coded 1 on polview3 is (fill in the blank) _____ percent.

The percentage of respondents who are coded 2 on polview3 is (fill in the blank) _____ percent.

Make sure that the two percentages you wrote down in part B match the percentages you recorded in part A. The numbers may be slightly different and may still be considered a match. If the two sets of numbers match, proceed to part C. If they do not match, you performed the recode incorrectly. Review this chapter’s discussion of the Recode procedure and try the recode again.

- C. In the Variable View of the Data Editor, change Decimals to 0, and then click in the Values cell and supply the appropriate labels for the numeric codes of the new polview3 variable: “Liberal” for code 1, “Moderate” for code 2, and “Conservative” for code 3. Run the **Analyze ► Descriptive Statistics ► Frequencies** procedure on polview3. Use your results to fill in the table below.

Ideology: Three Categories	Frequency ^a	Percent	Cumulative Percent
Liberal	?	?	?
Moderate	?	?	?
Conservative	?	?	100.00%
Total	?	100.00%	

^aRound weighted frequencies to two decimal places.

2. (Dataset: GSS. Variables: colmslm, libmslm, splmslm, wtss.) The GSS dataset contains three variables that gauge tolerance toward “anti-American Muslim clergymen”—whether they should be allowed to teach in college (colmslm), whether their books should be removed from the library (libmslm), and whether they should be allowed

P. Verma,Abdel-Salam G. Abdel-Salam,2019-04-02 Comprehensively teaches the basics of testing statistical assumptions in research and the importance in doing so This book facilitates researchers in checking the assumptions of statistical tests used in their research by focusing on the importance of checking assumptions in using statistical methods showing them how to check assumptions and explaining what to do if assumptions are not met Testing Statistical Assumptions in Research discusses the concepts of hypothesis testing and statistical errors in detail as well as the concepts of power sample size and effect size It introduces SPSS functionality and shows how to segregate data draw random samples file split and create variables automatically It then goes on to cover different assumptions required in survey studies and the importance of designing surveys in reporting the efficient findings The book provides various parametric tests and the related assumptions and shows the procedures for testing these assumptions using SPSS software To motivate readers to use assumptions it includes many situations where violation of assumptions affects the findings Assumptions required for different non parametric tests such as Chi square Mann Whitney Kruskal Wallis and Wilcoxon signed rank test are also discussed Finally it looks at assumptions in non parametric correlations such as bi serial correlation tetrachoric correlation and phi coefficient An excellent reference for graduate students and research scholars of any discipline in testing assumptions of statistical tests before using them in their research study Shows readers the adverse effect of violating the assumptions on findings by means of various illustrations Describes different assumptions associated with different statistical tests commonly used by research scholars Contains examples using SPSS which helps facilitate readers to understand the procedure involved in testing assumptions Looks at commonly used assumptions in statistical tests such as z t and F tests ANOVA correlation and regression analysis Testing Statistical Assumptions in Research is a valuable resource for graduate students of any discipline who write thesis or dissertation for empirical studies in their course works as well as for data analysts *Understanding Political Science Statistics* Peter Galderisi,2015-03-12 In politics you begin by asking theoretically interesting questions Sometimes statistics can help answer those questions When it comes to applied statistics students shouldn't just learn a vast array of formula they need to learn the basic concepts of statistics as solutions to particular problems Peter Galderisi demonstrates that statistics are a summary of how to answer the problem learn the math but only after learning the concepts and methodological considerations that give it context With this as a starting point Understanding Political Science Statistics asks students to consider how to address a research problem conceptually before

being led to the appropriate formula Throughout Galderisi looks at problems through a lens of observations and expectations which can be applied to myriad statistical techniques both descriptive and inferential This approach links the answers researchers get from their individual data analysis to the research designs and questions from which these analyses are derived By emphasizing the underlying logic of statistical analysis for greater understanding and drawing on applications and examples from political science including law the book illustrates how students can apply statistical concepts and techniques in their own research in future coursework and simply as an informed consumer of numbers in public discourse The following features help students master the material Legal and Methodological sidebars highlight key concepts and provide applied examples on law politics and methodology End of chapter exercises allow students to test their mastery of the basic concepts and techniques along the way A Sample Solutions Guide provides worked out answers for odd numbered exercises with all answers available in the Instructor s Manual Key Terms are helpfully called out in both Marginal Definitions and a Glossary A Companion Website www.routledge.com/cw/galderisi with further resources for both students and instructors A diverse array of data sets include subsets of the ANES and Eurobarometer surveys CCES US Congressional district data and a cross national dataset with political economic and demographic variables and Companion guides to SPSS and Stata walk students through the procedures for analysis and provide exercises that go hand in hand with online data sets
