Principles of Highway Engineering and Traffic Analysis

Fred L. Mannering, Scott S. Washburn, 2012-03-27 The 5th edition of the Mannering's Principles of Highway Engineering and Traffic Analysis continues to offer a concise approach that covers all the necessary fundamental concepts. New features in this edition include updates and more consistency with the latest edition of the Highway Capacity Manual HCM, the inclusion of sample FE exam questions, callouts of common mistakes, and added coverage on a qualitative description of the mechanistic approach.

Mechanistic-empirical Pavement Design Guide American Association of State Highway and Transportation Officials, 2008 *Supplement to the AASHTO Guide for Design of Pavement Structures* American Association of State Highway and Transportation Officials, 1998 This Supplement includes alternative design procedures that can be used in place of or in conjunction with the American Association of State Highway and Transportation Officials AASHTO Guide for the Design of Pavement Structures Part II Section 3.2 Rigid Pavement Design and Section 3.3 Rigid Pavement Joint Design. The Supplement contains the recommendations from National Cooperative Highway Research Program NCHRP Project 1-30 modified based on the results of the verification study conducted using the Long Term Pavement Performance LTPP database.

Concrete Pavement Design Guidance Notes Geoffrey Griffiths, Nick Thom, 2007-04-19 This comprehensive design guide summarizes current developments in the design of concrete pavements. Following an overview of the theory involved, the authors detail optimum design techniques and best practice with a focus on highway and infrastructure projects. Worked examples and calculations are provided to describe standard design methods illustrated with numerous case studies. The author provides guidance on how to use each method on particular projects with reference to UK, European, and US standards and codes of practice. Concrete Pavement Design Guidance Notes is an essential handbook for civil engineers, consultants, and contractors involved in the design and construction of concrete pavements and will also be of interest to students of pavement design.

Pavement Design Manual Colorado Department of Transportation, 2011 The purpose of the Manual is to provide the Colorado Department of Transportation CDOT and consultant pavement designers with a uniform and detailed procedure for designing pavements on CDOT projects.

Implementation of the Mechanistic-empirical Pavement Design Guide in Utah Michael I. Darter, Leslie Titus-Glover, Harold L. Von Quintus, 2009 Highway agencies across the nation are moving towards implementation of the new AASHTO Mechanistic Empirical Pavement Design Guide (MEPDG) for pavement design. The objective of this project was to implement the MEPDG into the daily operations of the Utah Department of Transportation (UDOT). The implementation of the MEPDG as a UDOT standard required modifications in some UDOT pavement design protocols, i.e., lab testing procedures, equipment, and protocols, traffic data reporting, software issues, design output interpretation, and others. A key requirement is validation of the MEPDG's nationally calibrated pavement distress and smoothness prediction models when applied under Utah conditions and performing local calibration if needed. This was

accomplished using data from Long Term Pavement Performance LTPP projects located in Utah and UDOT pavement management system PMS pavement sections The nationally calibrated MEPDG models were evaluated With the exception of the new hot mix asphalt HMA pavement total rutting model all other models were found to be reasonable The rutting model was locally calibrated to increase goodness of fit and remove significant bias Due to the nature of the data used in model validation it is recommended that further MEPDG model validation be accomplished in the future using a database that contains HMA pavement and jointed plain concrete pavement JPCP exhibiting moderate to severe deterioration This report represents Phase II of the UDOT MEPDG implementation study and builds on the Phase I study report completed in 2005 for UDOT The Draft User s Guide for UDOT Mechanistic Empirical Pavement Design UDOT Research Report No UT 09 11a dated October 2009 incorporates the findings of this report as inputs and pavement design guidelines for Utah for use by UDOT s pavement design engineers during trial implementation of the MEPDG Technical report documentation p **Development of Flexible Pavement Design Parameters for Use with the 1993 AASHTO Pavement Design Guidelines** ,2003

prediction accuracy for the rutting fatigue cracking and smoothness prediction models The AASHTOWare software was used to run design cases for combinations of traffic volume and subgrade soil stiffness Mr for twenty four locations in New York State The runs were performed for a road classified as Principal Arterial Interstate the 90% design reliability level and 15 years design period State wide average traffic volume parameters and axle load spectra were used to define the traffic The NYSDOT s Comprehensive Pavement Design Manual CPDM was initially used to obtain pavement design solutions The thicknesses for the select granular subgrade materials and the asphalt layer thicknesses were varied to include several values higher and lower than the thickness recommended by CPDM The thicknesses of asphalt surface and binder layers were kept constant only the thickness of the asphalt base layer was changed For each design combination the design case with thinnest asphalt layer for which the predicted distress was less the performance criteria was selected as the design solution The design solutions for each of the 24 locations were assembled in design tables The comparison of the design tables showed that some variation in the design thickness for the asphalt layers exists even with thicker asphalt layers being needed for the locations in the Upper part of the New York State The comparison between the new design tables and the table included in the CPDM proved that the new design tables require thinner asphalt layers at low AADTT and thicker asphalt layers at high AADTT than the corresponding design in the CPDM table For stiff subgrade soil and low AADTT the design thicknesses are almost the same in the new design tables and in the CPDM table
