Creativity, Giftedness, and Talent Development in Mathematics Bharath Sriraman, 2008-09-01 Our innovative spirit and creativity lies beneath the comforts and security of today's technologically evolved society Scientists inventors investors artists and leaders play a vital role in the advancement and transmission of knowledge Mathematics in particular plays a central role in numerous professions and has historically served as the gatekeeper to numerous other areas

of study particularly the hard sciences engineering and business Mathematics is also a major component in standardized tests in the U S and in university entrance exams in numerous parts of world Creativity and imagination is often evident when young children begin to develop numeric and spatial concepts and explore mathematical tasks that capture their interest Creativity is also an essential ingredient in the work of professional mathematicians Yet the bulk of mathematical thinking encouraged in the institutionalized setting of schools is focused on rote learning memorization and the mastery of numerous skills to solve specific problems prescribed by the curricula or aimed at standardized testing Given the lack of research based perspectives on talent development in mathematics education this monograph is specifically focused on contributions towards the constructs of creativity and giftedness in mathematics This monograph presents new perspectives for talent development in the mathematics classroom and gives insights into the psychology of creativity and giftedness The book is aimed at classroom teachers coordinators of gifted programs math contest coaches graduate students and researchers interested in creativity giftedness and talent development in mathematics

Pappas, 2023-09-13 MATHEMATICAL MACROEVOLUTION IN DIATOM RESEARCH Buy this book to learn how to use mathematics in macroevolution research and apply mathematics to study complex biological problems This book contains recent research in mathematical and analytical studies on diatoms These

studies reflect the complex and intricate nature of the problems being analyzed and the need to use mathematics as an aid in finding solutions. Diatoms are important components of marine food webs, the silica and carbon cycles, primary productivity and carbon sequestration. Their uniqueness as glass encased unicells and their presence throughout geologic history exemplifies the need to better understand such organisms. Explicating the role of diatoms in the biological world is no more urgent than their role as environmental and climate indicators and as such is aided by the mathematical studies in this book. The volume contains twelve original research papers as chapters. Macroevolutionary science topics covered are morphological analysis, morphospace analysis, adaptation, food web dynamics, origination, extinction, and diversity, biogeography, life cycle dynamics, complexity, symmetry, and evolvability. Mathematics used in the chapters include stochastic and delay differential and partial differential equations, differential geometry, probability theory, ergodic theory, group theory, knot theory, statistical distributions, chaos theory, and combinatorics. Applied sciences used in the chapters include networks, machine learning, robotics, computer vision, image processing, pattern recognition, and dynamical systems. The volume covers a diverse range of mathematical treatments of topics in diatom research. Audience: Diatom researchers, mathematical biologists, evolutionary and macroevolutionary biologists, paleontologists, paleobiologists, theoretical biologists, as well as researchers in applied mathematics, algorithm sciences, complex systems, science, computational sciences, informatics, computer vision, and image processing sciences, nanoscience, the biofuels industry, and applied engineering.

Advances in Business and Management Forecasting Kenneth D. Lawrence, Ronald K. Klimberg, 2009-05-08 Presents studies in the application of forecasting methodologies to such areas as sales, marketing, and strategic decision making. Preferences and Decisions Salvatore Greco, Ricardo Alberto Marques Pereira, Massimo Squillante, Ronald R. Yager, 2010-08-28 Decision making is an omnipresent, most crucial activity of the human being and also of virtually all artificial, broadly perceived intelligent systems that try to mimic human behavior, reasoning, and choice processes. It is quite obvious that such a relevance of decision making had triggered vast research effort on its very essence and attempts to develop tools and techniques which would make it possible to somehow mimic human decision making, related acts, even to automate decision making processes that had been so far reserved for the human beings. The roots of those attempts at a scientific analysis can be traced to the ancient times but clearly they have gained momentum in the recent 50 or 100 years following a general boom in science. Depending on the field of science, decision making can be viewed in different ways. The most general view can be that decision making boils down to some cognitive mental processes that lead to the selection of an option or a course of action among several alternatives. Then, looking in a deeper way from a psychological perspective, this process proceeds in the context of a set of needs, preferences, rational choice of an individual, a group of individuals, or even an organization. From a cognitive perspective, the decision

making process proceeds in the context of various interactions with the environment
