The Ordered Day James Ker,2023-03-21 Traces how the day has served as a key organizing concept in Roman culture and beyond How did ancient Romans keep track of time What constituted a day in ancient Rome was not the same twenty four hours we know today In The Ordered Day James Ker traces how the day served as a key organizing concept both in antiquity and in modern receptions of ancient Rome Romans used the story of how the day emerged as a unit of sociocultural time to give order to their own civic and imperial history Ancient literary descriptions of people s daily routines articulated distinctive forms of life within the social order And in the imperial period and beyond outsiders such as early Christians in their monastic rules and modern antiquarians in books on daily life ordered their knowledge of Roman life through reworking the day as a heuristic framework Scholarly interest in Roman time has recently moved from the larger unit of the year and calendar to smaller units of time especially in the study of sundials and other timekeeping technologies of the ancient Mediterranean Through extensive analysis of ancient literary texts and material culture as well as modern daily life handbooks Ker demonstrates the privileged role that small time played and continues to play in Roman literary and cultural history Ker argues that the ordering of the day provided the basis for the organizing of history society and modern knowledge about ancient Rome For readers curious about daily life in ancient Rome as well as for students and scholars of Roman history and Latin literature The Ordered Day provides an accessible and fascinating account of the makings of the Roman day and its relationship to modern time structures Morphological Plant Modeling: Unleashing Geometric and Topological Potential within the Plant Sciences Alexander Bucksch,Dan Chitwood,2017-10-13 An increasing population faces the growing demand for agricultural products and accurate global climate models that account for individual plant morphologies to predict favorable human habitat Both demands are rooted in an improved understanding of the mechanistic origins of plant development Such understanding requires geometric and topological descriptors to characterize the phenotype of plants and its link to genotypes However the current plant phenotyping framework relies on simple length and diameter measurements which fail to capture the exquisite architecture of plants The Research Topic Morphological Plant Modeling Unleashing Geometric and Topological Potential within the Plant Sciences is the result of a workshop held at National Institute for Mathematical and Biological Synthesis NIMBioS in Knoxville Tennessee From 2 4 September 2015 over 40 scientists from mathematics computer science engineering physics and biology came together to set new frontiers in combining plant phenotyping with recent results from shape theory at the interface of geometry and topology In doing so the Research Topic synthesizes the views from multiple disciplines to reveal the potential of new mathematical concepts to analyze and quantify the relationship between morphological plant features As such the Research Topic bundles examples of new mathematical techniques including persistent homology graph theory and shape statistics to tackle questions in crop

breeding developmental biology and vegetation modeling The challenge to model plant morphology under field conditions is a central theme of the included papers to address the problems of climate change and food security that require the integration of plant biology and mathematics from geometry and topology research applied to imaging and simulation techniques The introductory white paper written by the workshop participants identifies future directions in research education and policy making to integrate biological and mathematical approaches and to strengthen research at the interface of both disciplines TRADE: Transformations of Adriatic Europe (2nd–9th Centuries AD) Igor Borzić,Enrico Cirelli,Kristina Jelinčić Vučković,Ana Konestra,Ivana Ožanić Roguljić,2023-08-17 Spanning the period between the 2nd and 9th centuries this volume collects 45 papers dealing with the Adriatic area that aim to create a new dataset for the historical reconstruction of processes related to forms of settlement aspects of production and trade and the movement of pottery and other craft products between its two coasts *Data-driven Modelling of Structured Populations* Stephen P. Ellner,Dylan Z. Childs,Mark Rees,2016-05-13 This book is a How To guide for modeling population dynamics using Integral Projection Models IPM starting from observational data It is written by a leading research team in this area and includes code in the R language in the text and online to carry out all computations The intended audience are ecologists evolutionary biologists and mathematical biologists interested in developing data driven models for animal and plant populations IPMs may seem hard as they involve integrals The aim of this book is to demystify IPMs so they become the model of choice for populations structured by size or other continuously varying traits The book uses real examples of increasing complexity to show how the life cycle of the study organism naturally leads to the appropriate statistical analysis which leads directly to the IPM itself A wide range of model types and analyses are presented including model construction computational methods and the underlying theory with the more technical material in Boxes and Appendices Self contained R code which replicates all of the figures and calculations within the text is available to readers on GitHub Stephen P Ellner is Horace White Professor of Ecology and Evolutionary Biology at Cornell University USA Dylan Z Childs is Lecturer and NERC Postdoctoral Fellow in the Department of Animal and Plant Sciences at The University of Sheffield UK Mark Rees is Professor in the Department of Animal and Plant Sciences at The University of Sheffield UK **The Palgrave Handbook of Global Fantasy** Elana Gomel,Danielle Gurevitch,2023-06-07 This handbook is the first of its kind comprehensive overview of fantasy outside the Anglo American hegemony While most academic studies of fantasy follow the well trodden path of focusing on Tolkien Rowling and others our collection spotlights rich and unique fantasy literatures in India Australia Italy Greece Poland Russia China and many other areas of Europe Asia and the global South The first part focuses on the theoretical aspects of fantasy broadening and modifying existing definitions to accommodate the global reach of the genre The second part contains essays illuminating specific cultures countries and religious or ethnic traditions From Aboriginal myths to self representation of Tibet from the appropriation of the Polish Witcher by the American pop culture to modern Greek fantasy that does not rely on

the student activism of rhodesmustfall and feesmustfall These show how issues of public discussion span both archive and media verbal debates in formal spaces and visual performances that circulate in unpredictable ways **The Square of Opposition: A Cornerstone of Thought** Jean-Yves Béziau,Gianfranco Basti,2017-03-10 This is a collection of new investigations and discoveries on the theory of opposition square hexagon octagon polyhedra of opposition by the best specialists from all over the world The papers range from historical considerations to new mathematical developments of the theory of opposition including applications to theology theory of argumentation and metalogic *History of the Language Sciences / Geschichte der Sprachwissenschaften / Histoire des sciences du langage. 3. Kila,2022-09-08 This book critically analyses the prospects of overhauling the legal framework of climate change regulation of corporations in African state It adopts the dilute interventionism regulatory framework to tackle the culture of regulatory resistance by corporations in Africa Over the course of this volume Kikelomo O Kila critiques the climate change legal framework in all 53 African states and conducts an in depth case study of the two largest economies in Africa Nigeria and South Africa to highlight the commonality of the problems in Africa and the potential for the dilute

interventionism paradigm to significantly address these problems The book establishes why African states should directly intervene through legislative mechanisms to compel corporations to incorporate climate change mitigation in their business activities It proposes that this direct intervention should comprise a blend of prescriptive and facilitative mechanisms structured in a dilute interventionism regulatory model Overall this volume argues that implementing this model requires the institution of a strong and independent regulator with a veto firewall protection system that guarantees its de facto independence from government and external influences Corporate Regulation for Climate Change Mitigation in Africa will be of great interest to climate change stakeholders at the international regional and domestic levels policymakers regulatory practitioners and legal experts on corporate regulation It will also be an insightful resource for students and scholars of climate change and environmental law policy and governance
